

B. Tech. Production & Industrial Engineering

Semester-I

S.No.	Course Code	Subjects	L-T-P	Credits
1	ME 301	Engineering Graphics I	0-0-2	2
2	GPT 301	Moral and Value Education	2-0-0	2
3	ME 302	Introduction to Manufacturing Process	2-0-0	2
4	LNG 302	Professional Communication	3-0-0	3
5	ME 304	Workshop Practice & Technology	2-0-2	4
6	CE 401	Engineering Mechanics	3-0-0	3
7	MAS 411	Engineering Mathematics I	3-1-0	4
8	CHEM 513	Chemistry	3-1-1	5

TOTAL 25

Semester-II

S.No.	Course Code	Subjects	L-T-P	Credits
1	ECE 301	Basic Electronics	2-1-1	4
2	LNG 303	Professional Communication II	3-0-0	3
3	EEE 303	Electrical Engineering	3-0-1	4
4	PHY 312	Engineering Physics	3-1-1	5
5	ME 401	Engineering Graphics II	0-0-2	2
6	COMP 410	Computer and Languages	2-0-2	4
7	MAS 490	Engineering Mathematics II	3-1-0	4

TOTAL 26

Semester-III

S.No.	Course Code	Subjects	L-T-P	Credits
1	ME 403	Machine Drawing and Computer Aided Drafting	0-0-2	2
2	ME 404	Applied Thermodynamics	3-1-1	5
3	CE 406	Fluid Mechanics	3-0-1	4
4	CE 408	Strength of Materials	3-0-0	3
5	ME 410	Material Science and Testing	3-0-1	4
6	SES 415	Environmental Studies	2-0-0	2
7	COMP 510	Foundation of Information Technology	2-1-2	5
8	MAS 590	Engineering Mathematics III	3-1-0	4

TOTAL 29

Semester-IV

S.No.	Course Code	Subjects	L-T-P	Credits
1	EEE 404	Electrical Machines	3-0-1	4
2	ME 405	Measurement and Metrology	2-1-1	4
3	ME 407	Kinematics of Machines	3-1-0	4
4	ME 411	Industrial Engineering	3-1-0	4
5	ME 412	Manufacturing Science I	3-0-1	4
6	ME 416	Management Information System	3-0-0	3
7	MAS 491	Computer Based Numerical & Statistical Techniques	2-0-1	3

TOTAL 26

Semester-V

S.No.	Course Code	Subjects	L-T-P	Credits
1	BAM 315	Elements of Economics and Principles of Management Science	3-1-0	4
2	ME 409	Machine Design I	2-0-2	4
3	ME 503	Heat and Mass Transfer	3-0-1	4
4	ME 504	Dynamic of Machines	3-0-1	4
5	ME 506	Product Development and Design	2-1-0	3
6	ME 507	Manufacturing Science II	3-0-1	4
7	ME 508	IC Engine	3-1-0	4

TOTAL 27

Semester-VI

S.No.	Course Code	Subjects	L-T-P	Credits
1	ME 501	Tool Design	3-0-1	4
2	ME 505	Machine Design II	3-0-1	4
3	ME 509	Project Management	2-1-0	3
4	EEE 509	Automatic Controls	2-1-0	3
5	ME 510	Quality Engineering	3-0-1	4

6	ME 516	Energy Management	3-1-0	4
7	ME 580	Seminar I	0-0-2	2
8	CE 516	Fluid Machinery	2-1-1	4

TOTAL 28

Note: Four Weeks Practical summer training-2 after VI Semester (to be evaluated in VII Semester)

Semester-VII

S.No.	Course Code	Subjects	L-T-P	Credits
1	ME 518	Design against Fatigue and Failure	3-1-0	4
2	ME 601	Computer Aided Design	3-0-2	5
3	ME 602	Computer aided Manufacturing	3-0-2	5
4	ME 603	Automobile Engineering	2-1-1	4
5	ME 604	Industrial Training	0-0-1	1
6	ME 680	Seminar II	0-0-2	2
7	ME 699a	Project	0-0-2	2

TOTAL 23

Semester-VIII

S.No.	Course Code	Subjects	L-T-P	Credits
1	ME 606	Mechanical System Design	3-1-0	4
2	ME 665-679	Electives -1	3-0-0	3
3	ME 665-679	Electives -2	3-0-0	3
4	ME 665-679	Electives -3	3-0-0	3
5	ME 699b	Project (Execution and Report)	0-0-6	6

TOTAL 19

Syllabus

ENGINEERING GRAPHICS I

Course Code ME-301

CREDIT : 2 (0-0-

2)

1. Introduction: Graphics as a tool to communicate ideas, engineering drawing instruments and its uses. Lettering and dimensioning, scales, layouts of drawing sheets Construction of geometrical figures like pentagon and hexagon.

2. Orthographic Projection: Principles of orthographic projections, Principal and auxiliary planes, First and Third angle projections. Projection of points. Pictorial view. Projection of lines parallel to both the planes. Parallel to one and inclined to other, Inclined to both the planes. Application to practical problems. Projection of solid in simple position, Axis or slant edge inclined to one and parallel to other Plane, Solids lying on a face or generator on a plane.

Sectioning of solids lying in various positions, True shape of the section. Development of lateral surfaces, sheet metal drawing.

3. Isometric Projection: Principles of isometric projection, Isometric projection using box and offset methods.

References:

1. Bhatt N.D.: Elementary Engineering Drawing, Charohtar Publishing.
2. Laxmi Narayan V & Vaish W.: A Text Book of Practical Geometry on Geometrical Drawing.

MORAL AND VALUE EDUCATION

Course Code GPT-301

CREDIT : 2 (2-0-0)

My country and my people, the many Indians, being and becoming an Indian, nationalism and internationalism.

Some life issues- love, sex and marriage, men and money-value of time, meaning of work, human communication, human suffering, addiction, ecology, women's issues.

Understanding one's neighbour, neighbourhood groups: their structure and functions,

Patterns of social interaction of group dynamics.

Preparation for a career, choice of vocation, motivation for study and research. The present educational system: curriculum and syllabus, teaching methods, examination and work experience.

Definition of value education, moral and ethics, laws and morale based on ten commandments and two great commandments.

Discovery of self, self-awareness, growth of intellect- man's spiritual nature emotions, will, respect, the rights of life, liberty, property, truth and reputation.

Sin, origin of sin, manifestation of sin, the results of sin, the remedy of sin, sin as an act, Sin as a state, sin as a nature.

Conscience- as defined in oxford dictionary and Winston dictionary. Types of consciousness (such as Evil, convicted, purged, pure, weak, good, void of offence).

INTRODUCTION TO MANUFACTURING PROCESS

Course Code ME-302

CREDIT : 2 (2-0-0)

1. Introduction to engineering materials- Metals & alloys- composition-properties and uses
2. Manufacturing Process – Classification, mechanization, Automation , Inter-changeability, computers in manufacturing ,CAD,CAM,CIM,MRP, GT
3. Metal Forming- Brief introduction to press working, casting, plastic processing ,Smithy operations.
4. Machine Tools-Introduction to lathe machines , Drilling, Shaper, Slotter, Planer , Boring machines.
5. Machine Operation-Turning, Threading, Boring, Drilling.
6. Plastic Processing

PROFESSIONAL COMMUNICATION I

**Course Code LNG-302
(3-0-0)**

CREDIT : 3

- 1. Study of selected Literacy Texts.**
 - I.Collection of short essays.
 - II.Collection of short stories.
- 2. Testing Written Comprehension Ability.:** Comprehension Passages of 500 words Multiple Choice Questions.
- 3. Composition & Grammar.**
- 4.Report Writing:** Characteristics of Business Reports. Structure of reports: Front Matter, Main Body, and Back Matter Style of Reports: Definition, the Scientific Attitude, Readability of Reports, Choice of Words and Phrases, Construction and length of sentences, Construction and length of Paragraphs. The lineout or break up of a format report Blank Form Report, Frogen Report, Memoranda Form Report, Periodic Report, Miscellaneous Report.
- 5. Speech Drills:**

Using the language laboratory to develop Speaking Communication Skills.

 - (i) Word Accent: Production of correct accentual patterns involving two and three syllabi words.
 - (j) Rhythm: Stress-tone rhythm in sentences.
 - (k) Intonation: Rising Tone and Talking Tone Ear Training and Production Tests.

References:

- 1. Close R.A.:** A University Grammar of English Workbook.

- Longman, London, 1998.
2. Jones, Daniel: English Pronouncing Dictionary, ELBS, and London, 1999.
 3. Sharma S.D: A Textbook of Spoken and Written English, Vikas, 1994.
 4. Alvarez, Joseph A.: The Elements of Technical Writing, New York: Harcourt, 1998.
 5. S.Bansal, R.K.: Spoken English For India, Orient Longman, 1993.

WORKSHOP PRACTICE AND TECHNOLOGY

Course Code ME-304

**CREDIT : 4
(2-0-2)**

- I. Introduction to tools- Description , applications of tools used in different shops
2. Carpentry- Classification of tools-marking and measuring-holding and supporting-planning-cutting- boring –striking-miscellaneous-etc.

3. Fitting shop-Marking & measuring, holding, cutting tools etc
4. Smithy- holding and supporting tools, cutting tools , striking tools
5. Sheet metal

1.Welding

- II Properties of metals- Strength, elasticity , plasticity, Malleability , hardness, brittleness etc.
- III.Timber- Introduction-selection of timbers-seasoning of timbers – timber defects
- IV.Brief introduction to joining process-Nuts& bolts-Screw- Screws-rivets & riveting- welding- electric arc-gas welding- TIG-MIG welding –threads
- V.Extrusion-Classification-process geometry- Geometrical relationship- analysis of extrusion- stresses- load – power – maximum reduction possible-working and application of indirect extrusion- hydrostatic extrusion- defects in extruded parts.
- VI . Forging – classification- strip sand disc forging- Process geometry-geometrical relationship- Analysis - defects in forged products .
- VII. Rolling – classification-process geometry-geometrical relationship analysis-rolling pressure & rolling separating force.

ENGINEERING MECHANICS

Course Code CE-401

CREDIT : 4 (2-0-

2)

1. force and equilibrium

Basic concepts, force, moment and couple, principle of transmissibility, verigonon’s theorem, resultant of force systems, concurrent and non-concurrent coplanar forces, funicular polygon, and free body diagram.

1. Trusses

Plane structures, various methods of analysis of trusses, method of joints, method of sections and graphical method.

2. Moment of inertia

Center of gravity, centroids of line, area, volume and composite Bodies, area moment of inertia and mass moment of inertia for plane figures and bodies including composite bodies, product moment of inertia, parallel axis theorem, principal moment of inertia.

3. Friction

Introduction, dry friction, co-efficient of static friction, friction cone, screw jack and belt friction.

4. Beams

Bending moment and shear force diagrams for statically determinate beams.

5. Kinematics of Rigid Bodies

Plane motion, absolute motion, relative motion, translating axes and rotating axes.

6. Kinetics of Rigid Bodies

Plane motion, force Mass and Acceleration, Work and energy, Impulse and momentum, principles of energy conservation, Principle of virtual work, D'AleMbert's principal and dynamic equilibrium.

3. Meriam, J.L: Dynamics, John Wiley.
4. Shames I.H: Engineering Mechanics, Prentice Hall of India.
5. Dayaratnam, P: Statistics, Tata Mc Graw Hill.
6. Timeshenko, S.and Ypung D: Engineering Mechanics, Mc Graw Hill.

ENGINEERING MATHEMATICS - I

**Course Code MAS-411
1-0)**

CREDIT : 4 (3-

1. **Matrices** :Elementary row and column transformations, Linear dependence, Rank of matrix, Consistency of system of linear equations and solution of linear equations, Characteristic equation, and Caley-Hamilton theorem, Eigen values and eigen vectors, Diagonalisation, Complex and unitary matrices.
2. **Differential Calculus-I:**Leibnitz theorem, Partial differentiation, Euler's theorem, Asymptotes, Curve tracing, Change of Variables, expansion of functions of one and several variables. Cylindrical and spherical coordinate systems
3. **Differential Calculus-II:**Jacobian, Approximation of errors, Extrema of function of several variables, Lagrange's method of multipliers (simple applications).
4. **Multiple integrals:**Double and triple integrals, change of order, change of variables, Gamma & Beta functions,application to area, volume, Disrichlet's integral and its applications.
5. **Vector Calculus:**Point functions, Gradient, divergence and curl of a vector and their physical interpretations, line, surface & volume integrals, Gauss divergence theorem and Greens & Stokes theorem.

References:

1. Shanti Narayan: A Text Book of matrices, S.Chand & Co.
2. Thomas/Finney: Calculus and Analytic Geometry, Narosa Pub. House.

5. B.S. Grewal: Higher Engineering Mathematics, Khanna Publishers.
6. Jaggi & Mathur : Advanced Engineering Mathematics, Khanna Publishers.
7. Piskunov, N.: Differential & Integral Calculus, Moscow Peace Pub.

8. H.K. Das, Engineering Mathematics.
9. Vijai Shankar Verma & Sanjeev Kumar, Engineering Mathematics.
10. Rakesh Dubey, Engineering Mathematics

CHEMISTRY

Course Code CHEM-513

CREDIT : 5 (3-1-

1)

1. **General Chemistry:**Advanced Theory of Chemical Bonding: Valence bond and molecular orbital theory. Structure of NH_3 , H_2O , SO_3 , PCl_5 , XeO_2 molecules. Theories of bonding in metals and semiconductors, n-type and p-type semi-conductors, Imperfections in materials. Born-Haber cycle, Bragg's conditions.
2. **Physical Chemistry:**Equilibrium on Reactivity: Bronsted and Lewis Acids, pH, pKa, pKb Scale, Buffer solution. Stereochemistry of organic compounds, Co-ordination chemistry, Nomenclature, Valence Bond and crystal field theory.
Chemical Kinetics & Catalysis: Rate law, Order of reactions, Parallel and reversible reactions, Catalysis, Homogeneous and heterogeneous catalysis, Characteristics of catalytic reaction, Catalytic promoters and poisons, Auto catalysis and negative catalysis, Intermediate compound formation theory and absorption theory.
3. **Environment Chemistry:**Atmospheric Chemistry & Air Pollution: Environment and Ecology, Environmental segments, Structure and composition of atmosphere, Radiation Balance of Earth and Green House Effect, Formation and depletion of Ozone layer, Chemical and photochemical reactions of various species in atmosphere, Air pollution – sources, reactions and sinks for pollutants, Acid rains and Smog formation. Pollution control methods.
Corrosion and Lubrication: Introduction, causes of corrosion, Theories of corrosion, Factors influencing Corrosion, Corrosion inhibitors, passivity, Types of corrosion, Protection from corrosion and protective coatings. Theory, Classification and mechanism of Lubrication.
4. **Applied Chemistry:**Water and Waste Water Chemistry: Introduction, Hardness of water, characteristics imparted by impurities, Analysis of contaminants, Treatment of Water by Zeolite, L-S process, Boiler feed water, Waste water treatment.
5. **Chemistry of Engineering Materials:**Fuels & Combustion: Classification of fuels, Non conventional Energy, Biogas, Biomass and solar energy. Calorific value- gross and net, characteristics of good fuel, Determination of calorific value, Solid fuels, Analysis of coal, Liquid fuels.
Instrumentation: IR, UV, NMR, MASS AND ASS.
6. **Industrial Chemistry:**Polymer Chemistry: Classification of Polymers, Including Biopolymers condensation and addition polymers and their applications. Industrial Application and mechanism of chemical reaction, Beckman, Hoffman, Reimer Tiemann, Cunnizzaro, Diels Alder and Skraup synthesis.

6. S.S Dara /Environmental Chemistry.
7. A.K De/Environmental Chemistry.

LIST OF EXPERIMENTS (ANY TEN):

1. To determine the percentage of available chlorine in the supplied sample of Bleaching powder.

2. To determine the Ferrous content in the supplied sample of iron ore by titrimetric analysis against standard $K^{\square}Cr^{\square}$ solution using $K_2Fe(CN)_6$ as external indicator.
3. To determine the chloride content in supplied water sample using Mohr's method.
4. To determine the constituents and amount of alkalinity of the supplied water sample.
5. To determine the Temporary and Permanent hardness of water sample by Coplexometry.
6. To find the Chemical Oxygen Demand of a waste water sample using Potassium dichromate.
7. To determine iron concentration in the sample of water by spectrophotometric method.
8. To find out the Velocity constant for the inversion of cane sugar in acidic medium and to show that inversion follows the first order kinetics.
9. To determine the Molecular weight of a polystyrene sample by using Viscometer method.
10. To determine pH of a solution using a pH-meter and titration of such a solution pH-metrically.
11. To determine the calorific value of a fuel sample by using a Bomb Calorimeter.
12. Analysis of a coal sample by proximate analysis method.

References:

1. Vogel's Qualitative Chemical Analysis: Ed. By Jaffery Bassette et. al. (ELBS).
2. Applied Chemistry- Theory and Practice, 2nd Ed. By Virmani and Narula (New Age International Pub.).
3. Experiments in Engineering Chemistry, Ed. By Masood Alam (Maktaba Jamia Limited).

BASIC ELECTRONICS

Course Code ECE-301

CREDIT : 4 (2-

1-1)

1. Energy Bands in Solids: Energy band theory of solids, Concept of forbidden gap, Insulators, Metals and Semiconductors.

2. Transport Phenomenon in Semiconductors: Mobility and conductivity, electrons and holes in an intrinsic semiconductor, Donor and acceptor impurities, Fermi level, carrier densities in semiconductor, electrical properties of semiconductor, Hall effect, Diffusion.

3. Junction Diode: P-N junction, depletion layer, V-I characteristics, diode resistance, capacitance, switching time, diode application as a rectifier (half wave and full wave), diode circuits (clipper, clamper, voltage multipliers) Breakdown mechanism, Zener & Avalanche, breakdown characteristics, Zener diode and its applications.

4. Bi-junction Transistor: Bipolar junction Transistor, CE, CB and CC configuration, characteristic curves (cut off, active and saturation region), Requirement of biasing, biasing types and biasing analysis, stability.

5. Transistor as an Amplifier: Graphical analysis of CE amplifier, concept of voltage gain, current gain and power gain, h-parameter (low frequency), computation of A_v , R_i , R_o and approximate formulae.

6. Operational Amplifiers: Concepts of ideal op-amp, inverting, non-inverting and unity gain amplifiers, adders, difference amplifiers. , Integrators.

7. Switching Theory & Logic Gates: Number systems, conversion of bases, Boolean algebra, Logic Gates, concept of universal gate, canonical forms, and minimization using K-map.

8. Electronic Instruments: Multimeter, CRO and its Applications.

References:

1. Boylestad & Nashelsky/Electronic Devices & Circuits/ PHI.
2. Morris Mano/Digital Computer Design/ PHI.
3. Milliman, J. Halkias/Integrated Electronics/TMH.
4. Malvino & Leach/Digital Principles & Application/

List of Experiments:

1. Study of Diode characteristics.
2. Study of Common Base Transistor characteristics.
3. Study of Common Emitter Transistor characteristics.
4. Study of Half Wave Rectifier with effect of Capacitor and also calculate the ripple factor.
5. Study of Full- Wave Rectifier with effect of Capacitor and also calculate the ripple factor.
6. Study of Various Logic Gates.
7. Study of Clipping and clamping Circuits.
8. Study of C.R.O., Function generator, Multimeter.

PROFESSIONAL COMMUNICATION II

Course Code LNG-303

CREDIT : 3 (3-

0-0)

1. Technical Written Communication

- (a) Nature, origin and development of technical written communication.
- (b) Salient Features.
- (c) Difference between technical writing and general writing.

2. Pre-requisites of Scientific and Technical Communication

- (a) Fragment sentences.
- (b) Parallel comparisons.
- (c) Elements of a series.
- (d) Squinting construction and split infinitive.
- (e) Modifiers, connectives, antecedents and clause subordination.
- (f) Dangling participles and gerunds.
- (g) Ellipsis.
- (h) Coherence, Unity, Chronological method, spatial method, inductive method, linear method, deductive method, interrupted method.

3. Business Correspondence

- (a) General principles of business correspondence.
- (b) Ramifications of business letters.
- (c) Letters giving instructions, inquiries and answers to enquiries, complaints and adjustments, letters urging action, employment letters, application and resumes.

4. Proposal Writing

- (a) Proposal: Definitions and kinds.
- (b) Division of format proposals (front matter, title page, summary/ abstract, Table of contents etc.)
- (c) Statement of request, body- statement of problem, background, scope, methodology, Advantages and disadvantages.

5. Writing Scientific and Semi-technical Articles

- (a) Source material, topic sentence, literature review.
- (b) Tables, figures, footnotes, bibliography.

6. Study of Scientific and General Texts.

(A). Prescribed text books for detailed study

- 1 Arora, V.N (et. al.), Improve your writing (Delhi: Oxford University Press, 1981).
- 2 Lesson No. 1.2, 1.6, 2.4, 3.5, 4.1, 4.3, 5.1, 5.4, 6.2.

(B). For extended Reading (any one of the following)

- 1 Orwell George, Nineteen Eighty Four (New York: Penguin, 1984)
- 2 Hemingway, Ernest, The old man and the Sea, (Oxford: 1990)

7. Listening Comprehension

(a). Ear-training.

(b). Uses of latest scientific techniques (AVR Comprehension trainer, SRA Comprehension trainer, SRA Comprehension Accelerator, AVR Comprehension Reteometer.)

8. Reading Comprehension.

(a) Scanning method.

(b) Skimming method.

9. Phonetic Transcription

10. Stresses and Intonation.

ELECTRICAL ENGINEERING

Course Code EEE-303

CREDIT : 4 (3-0-1)

1. **Sinusoidal Steady State Circuit Analysis:** Voltage, Current, Sinusoidal & Phasor representation. 1-Phase A.C. Circuit-behavior of resistance, Inductance and Capacitance and their combinations, impedance, concept of power, power factor, series & parallel resonance-bandwidth and quality factor.
2. **Network Theory:** Introduction to basic physical laws, Network theory: Superposition, Thevenin, Norton, Maximum Power transfer theorems, Star-delta transformation, Circuit theory Concepts: Mesh and Nodal analysis.
3. **Three Phase Supply:** Star/delta connections, line and phase voltage/current relations, Three-phase power and its measurement.
4. **Basic Instruments:** Instruments for measurement of voltage, Current, power and energy: Construction, principle and application.
5. **Magnetic Circuit and Transformer:** Magnetic circuit concept, theory and working principle of single-phase transformer.
6. **Rotating Machines:** Principles of energy conversion, Basic concepts of rotating machines, DC machines, Different types and their characteristics & applications. Elementary idea of operation of synchronous and induction machines. Single-phase induction & stepper motors, Applications.
7. **Power Systems:** Introduction, Elements, Line diagram, Supply systems, Power factor improvement.

Reference:

1. V. Del Toro/ Principles of Electrical Engineering/ PHI.
2. W.H Hayt & J.E Kennedy/ Engineering Circuit Analysis/ McGraw Hill.

3. I.J Nagrath/ Basic Electrical Engineering/ Tata McGraw Hill.
4. A.E Fitzgerald/ Electronic Instruments & Measurement Techniques/ PHI.
5. Higginbotham L.Grabel/Basic Electrical Engineering/ McGraw Hill.

LIST OF PRACTICALS

A minimum of 10 experiments from the following:

1. Verification of Thevenin's Theorem.
2. Verification of Superposition Theorem.
3. Verification of Norton's Theorem
4. Verification of Kirchoff's Law.
5. To measure the value of impedance and power factor in RLC series A.C. circuit.
6. To measure the value of impedance and power factor in RLC parallel A.C. circuit.
7. To study resonance by frequency variation in series RLC circuit.
8. To calibrate the given energy meter with the help of a standard wattmeter.
9. To find the relation between line current and phase current and line voltage and phase voltage in Star – Delta connections.
10. To perform open circuit and short circuit test and draw the equivalent circuit of a single-phase transformer.
11. To measure three phase power by two-wattmeter method.
12. To draw the magnetizing characteristic of a single-phase transformer.

Additional experiments may be added based on contents of syllabi.

ENGINEERING PHYSICS

Course Code PHY-312

CREDIT :

5 (3-1-1)

1. **Special Theory of Relativity:** Michelson Morley experiment, Inertial frames of reference, Postulates of special theory of relativity, Lorentz transformation equation of space and time, length contraction, time dilaton, addition of velocities, variation of mass with velocity, mass-energy equivalence.
2. **Optics :** Interference: Coherent sources, Conditions of interference, Fresnel's bi-prism experiment, displacement of fringes, interference in thin films, wedge shaped film, Newton's rings.
Diffraction: Single slit and double slit diffraction, diffraction grating, Reyleigh's criterion of limit of resolution, resolving power of telescope, microscope and grating.
Polarization: Polarization of light, Pictorial representation of polarized light, Brewster's law, Malus law, Phenomena of double refraction, Geometry of calcite crystal, Optical activity, Specific rotation, Polarimeter.
3. **Fields:** Scalar and vector fields, Gradient of a scalar field, divergence and curl of a vector field, line integral, conservative vector field, Gauss' Divergence theorem, Stoke's theorem.
4. **Electrostatics:** Gauss' law and its applications, Poisson and Laplace equations. Maxwell's equations, Basic Concepts of Electromagnetic waves and its solution in free space.
5. **Magnetic Properties of Materials:** Para, dia, ferro, antiferro and ferro-magnetic materials, hysteresis, Methods of plotting hysteresis curve of a ferro-magnetic material and their uses, magnetic circuits.

6. **X-Rays:** Origin of X-rays, Continuous and characteristic X-Ray spectra, Moseley's law, Absorption of X-rays, Diffraction of X-rays, Bragg's law, Bragg's spectrometer, Practical application of X-rays, Compton effect.
7. **Quantum Theory:** Wave particle duality, De Broglie concept of matter waves, Davisson and Germer experiment, Heisenberg's uncertainty principle, Schrodinger wave equation and its applications.
8. **Laser**
Spontaneous and stimulated emission of radiation, Einstein's coefficients, Main components of a laser, types of lasers and their applications.

References:

1. Arthur Beiser: Concepts Of Modern Physics, TMH.
2. Subramanyam & Brij Lal: A Text Book of Optics, S. Chand & Co.
3. K.K. Tiwari: Electricity & Magnetism, S. Chand & Co.
4. Brij Lal & Subramanyam: Electricity & Magnetism.
5. Wehr, Richardo & Adair: Physics of the Atom.

List Of Experiments (Any Ten)

1. To determine the wavelength of monochromatic light by Newton's ring.
2. To determine the wavelength of monochromatic light with the help of Fresnel's biprism.
3. To determine the focal length of two lenses by nodal slide and locate the position of cardinal points.
4. To determine the specific rotation of cane sugar solution using half shade polarimeter.
5. To determine the wavelength of spectral lines using plane transmission grating.
6. To determine the specific resistance of the material of given wire using Carey Foster's bridge.
7. To determine the variation of magnetic field along the axis of a current carrying coil and then to estimate the radius of the coil.
8. To verify Stefan's Law by electrical method.
9. To calibrate the given ammeter and voltmeter.
10. To study the Hall Effect and determine Hall coefficient, carrier density and mobility of a given semiconductor material using Hall Effect set up.
11. To determine the energy band gap of a given semiconductor material.
12. To determine E.C.E of copper using Tangent or Helmholtz galvanometer.
13. To draw hysteresis curve of a given sample of ferromagnetic material and from this to determine magnetic susceptibility and permeability of the given specimen.
14. To determine the ballistic constant of a ballistic galvanometer.
15. To determine the viscosity of a liquid.
16. To determine refractive index of the material of prism using spectrometer.

ENGINEERING GRAPHICS II

Course Code ME-401

CREDIT:2(0-0-2)

1. **Introduction:** Graphic language, Classification of drawings, Principles of drawing: IS codes for Machine drawing, Lines, Sections, Dimensioning, Standard abbreviation.
2. **Orthographic Projections:** Principles of first and third angle projections, drawing and sketching of machine elements in orthographic projections, spacing of views.
3. **Screwed (Threaded) Fasteners:** Introduction, Screw thread nomenclature, Forms of threads, Thread series, Thread designation. Representation of threads, Bolted joints, Locking arrangements for nuts, Foundation bolts.
4. **Keys and Cotters:** Keys, Cotter joints.
5. **Shaft Couplings:** Introduction, Rigid and flexible coupling.

6. **Riveted Joints:** Introduction, Rivets and riveting, Rivet heads, Classification of riveted joints.
7. **Assembly Drawing:** Introduction, Engine parts, Stuffing box etc.
8. **Free Hand Sketching:** Need for free hand sketching, Free hand sketching of some threaded fasteners and simple machine components.

3. Engineering drawing practice for schools and colleges, SP 46-1998(BIS).

COMPUTER AND LANGUAGES

Course Code COM-410

CREDIT : 4(2-0-2)

- 1 Computer hardware components and their functions
- 2 Basic operating system concepts
- 3 MS-DOS and getting to know DOS commands
- 4 Familiarizing with WINDOWS environment
- 5 Getting started with UNIX
- 6 Files and Directories and their use in different Operating System Environments

- 7 Getting to know different editors like edit & vi
- 8 Introduction to Internet
- 9 Getting familiar with Web Browsers like Netscape Navigator & Internet Explorer
- 10 Sending & receiving mail over Internet
- 11 Introduction to PINE and /or ELM
- 12 Need of programming languages.
- 13 Language translators.
- 14 Introduction to “C” language
- 15 Data types operators and expressions.
- 16 Conditional & looping statements.
- 17 Function & Arrays.
- 18 Introduction to Pointers & Structures.

References:

1. DOS the complete reference by Kris Jamsa, Tata- McGraw Hill Publication.
2. UNIX POWER TOOLS by J.Peek Tim O’reilly & M. Locekides, BPB Publication.
3. The ‘C’ Programming Language by B.W Kernighan & D.M Ritchie, Prentice Hall of India.
4. Using LINUX- Latest Edition by Jade Tackett & David Ganter, Prentice Hall of India.

LIST OF PRACTICALS

1. Basic Internal and External DOS Commands.
2. Write a simple batch program.
3. Giving exposure to Windows environment.
4. File and program management in windows.
5. Practice of basic UNIX commands.
6. Write simple shell script.
7. Introduction to word processing.
8. Exposure to advance feature supported by some editors.
9. Net Surfing.
10. Creation and checking of E-mail account.

11. Write C program to demonstrate each of the following:
 - 1 Conditional statements.
 - 2 Looping statements.
 - 3 User defined functions.
 - 4 Arrays.
 - 5 Pointers and structures.
12. Familiarizing mail account using PINE, deleting, creating folder/mail-messages, adding signature, creating director of addresses.

ENGINEERING MATHEMATICS II

Course Code MAS-490

CREDIT : 4 (3-1-0)

1. **Differential Equations:** Ordinary differential equations of first order, exact differential equations, Linear differential equations of 1st order with constant coefficients, Complementary functions and particular integrals, Simultaneous linear differential equations, Solution of second order differential equation by changing dependent and independent variables, Method of variation of parameters, Applications to engineering problems(without derivation).
2. **Series Solution & Special Functions:** Series solutions of ODE of 2nd order with variable coefficients with special emphasis to the differential of legendre and Bessel. Legendre's polynomials, bessel's functions and their properties.
3. **Laplace Transform:** Laplace transform, Existence theorem, Laplace transform derivatives and integrals, Inverse Laplace transform, Unit-step function, Dirac Delta function, Laplace transform of periodic functions, convolution theorem Applications to solve simple linear and simultaneous differential equations.
4. **Fourier Series And Partial Differential Equations :** Periodic functions, Trigonometric series, Fourier series of functions with period 2π , Eulers formulae, functions having arbitrary period, even and odd functions, change of interval, half range sine and cosine series.

Introduction to partial differential equations, linear partial differential equation with constant coefficients of 2nd order and their classifications, parabolic, elliptic & hyperbolic with illustrative examples.
5. **Application of Partial Differential Equations**

Method of separation of variables for solving partial differential equation, Wave equation up to two dimension, Laplace equation in two dimension, Heat conduction equations up to two dimension, Equation of transmission Lines.

2. B.S Grewal: Higher Engineering Mathematics, Khanna Publishers.
3. Jaggi & Mathur: Advanced Engineering Mathematics, Khanna Publishers.

4. C. Prasad: Advanced Mathematics for Engineers, Prasad Mudranalaya.

MACHINE DRAWING & COMPUTER AIDED DRAFTING LAB

Course Code ME-403
0-2)

CREDIT : 2 (0-

Review (1 Class)

Orthographic projection, missing lines, interpretation of views and sectioning.

Part and Assembly Drawing (2 Classes):

Introduction, assemblies drawing of stuffing box, steam engine cross head, air valves, lathe tailstock, gate valve, screw jack, connecting rods, spark plug, tool post, safety valves etc. Drawing exercise.

Specification of Materials:

Engineering materials, code designation of steels, copper and aluminum and its alloys.

Limits, Tolerance and fits: (1 Class)

Introduction, Limit systems, tolerance fits, drawings and exercises.

Surface Roughness: Introduction, surface roughness, machining symbols, indication of surface roughness, drawing exercises.

Production Drawing: Introduction to developing and reading or production drawing of simple machine elements like helical gear, bevel gear, flange, pinion shaft, connecting rod, crankshaft, belt pulley, piston details etc. Idea about tool drawing.

Computer Aided Drafting: Introduction, input, output devices, introduction to drafting software like Auto CAD, basic commands and development of simple 2D and 3D drawings.

References:

1. Machine Drawing by Narayana, et.al, New Age.
2. Production Drawing by Narayana, et.al. New Age.
3. Auto CAD 14 for Engineering Drawing by P. Nageswara Rao, TMH.

APPLIED THERMODYNAMICS

Course Code ME-404
1)

CREDIT : 5 (3-1-

Review of Thermodynamics: Brief review of basic laws of thermodynamics, Helmholtz & Gibb's function, Mathematical conditions for exact differential. The Maxwell Relations, Clapeyron Equation, Joule – Thompson coefficient curve, Availability & Irreversibility.

Steam Boilers: Brief review of properties of steam, use of steam table and Mollier chart, Steam generators- classifications, working of fire-tube and water tube boilers, boiler mountings & accessories, Air preheater, Feed water heater, Superheater, Boiler efficiency, Equivalent evaporation, Heat balance. Boiler draught.

Steam Engines: Rankine and modified Rankine cycles, Working of engine indicator diagram.

Nozzle: Flow through nozzle, variation of velocity, area and specific volume, Nozzle efficiency, Critical condition.

Steam Turbines: Classification, impulse and reaction turbines, Compounding, Velocity diagram, workdone, Reaction, Efficiency, Bleeding, Comparison with steam engines, Reheat factor, Governing of turbines, Velocity diagram, Work done, Efficiencies of reaction and impulse turbines.

IC Engines: Classification, Construction details. Application of four stroke and two stroke engines, Review of Otto, diesel and Dual cycles, Work done, Efficiencies, Indicator diagram, Valve timing diagram. Efficiencies

Gas Turbines: Review of Bryaton cycle, Thermal refinement of a gas turbine cycle, Comparison with IC Engine and steam turbine.

Refrigeration and Heat Pump Cycles: Definition, Types, Carnot refrigerating cycle, Bell Coleman cycle. Unit of refrigeration. Description of simple vapour compression and vapour absorption systems. Introduction to air-conditioning.

Compressors: Reciprocating compressor, Construction details and working principle, Efficiency, Power input, Intercooling, Working principle of centrifugal and axial flow compressor, Power input calculation.

4. Applied Thermodynamics by R. Yadav 6th edn, CPH, Allahabad.
5. Thermal Engg., By R. K. Rajput, Laxmi Publication.
6. Turbine Compressors & Fans by S. M. Yahya, HMT
7. Thermal Engg. By S .K. kulshrestha, Vicars, Pub. House Ltd.
8. Fundamental of Engg. Thermodynamics by R. Yadav 7th edn, CPH, Allahabad
9. Engg. Thermodynamics by Nag
10. Engg. Thermodynamics by C .P. Arora

FLUID MECHANICS

Course Code CE-406

CREDIT : 4 (3-0-

1)

I. Introduction: Fluids and continuum Physical properties of fluids, ideal and real fluids, Newtonian and Non-Newtonian fluids, measurement of surface tension.

II. Kinematics of Fluid flow: Steady and unsteady, uniform and nonuniform, laminar and turbulent flows, one, two and three dimensional flows, streamlines, streak lines and path lines, continuity equation, rotation and circulation, elementary explanation of stream function and velocity potential, graphical and experimental methods of drawing flow nets.

III. Fluid Statics: Pressure-density-height relationship, manometers, pressure on plane and curved surfaces center of pressure, buoyancy stability of immersed and floating bodies, fluid masses subjected to uniform accelerations, measurement of pressure.

IV. Dynamics of fluid flow: Euler's equation of motion along a streamline and its integration, Bernoulli's equation and its applications-Pitot tube, flow through orifices, mouthpieces, nozzles, notches & weirs, sluice gates under free and submerged flow conditions, Aeration of nappe, cavitation, free and forced vortex momentum equation and its application of energy and momentum equations, flow measurements, determination of Cd, Cc, and Cv, energy loss.

V. Dimensional Analysis and Hydraulic Similitude: Dimensional analysis, Buckingham's Theorem, important dimensionless numbers and their significance, geometric, Kinematic and dynamic similarity, model studies.

VI. Laminar and Turbulent flow through pipes, stoke's law, flow between parallel plates, flow through porous media, fluidisation, measurement of viscosity, transition from laminar to turbulent flow, turbulent flow, equation for turbulent flow, eddy viscosity, mixing length concept and velocity distribution in turbulent flow, Hot-wire anemometer and LDA.

VII. Boundary Layer Analysis: Boundary layer thicknesses boundary layer over a flat plate, laminar boundary layer, application of momentum equation, turbulent boundary layer, laminar sub-layer, smooth and rough boundaries, atmospheric boundary layer, local and average friction coefficient, separation and its control, measurement of shear.

VIII. Pipe flow: Nature of turbulent flow in pipes, equation for velocity distribution over smooth and rough surfaces, resistance coefficient and its variation, flow in sudden expansion, contraction, diffusers, bends, valves and siphons, concept of equivalent length, branched pipes, pipes in series and parallel, simple networks.

IX. Flow past Submerged Bodies: Drag and lift, drag on a sphere, cylinder and disc, lift, Magnus effect and circulation.

X. Compressibility Effects in pipe Flow: Transmission of pressure waves in rigid and elastic pipes, water hammer, analysis of simple surge tank excluding friction.

6. L.H. Shames, "Mechanics of Fluids", McGraw Hill, Int. Student, Education.
7. Fluid Mechanics by Jagdish Lal
8. Vijay Gupta and S.K. Gupta, "Fluid Mechanics and its Applications", Villey Eastern Ltd.
9. Fluid Mechanics by Modi & Seth.

FLUID MECHANICS LAB

1. To determine experimentally the metacentric height of ship model.
2. To verify the momentum equation experimentally.
3. To determine the coefficient of discharge of an orifice (or a mouth piece) of a given shape. Also to determine the coefficient of velocity and the coefficient of contraction of the orifice (or the mouth piece)
4. To plot the flow net for a given model using the concept of electrical analogy.
5. To measure surface tension of a liquid.

6. To calibrate an orifice meter and study the variation of the coefficient of discharge with the Reynolds number.
7. To verify Darcy's law and to find out the coefficient of permeability of the given medium.
8. To study the transition from laminar to turbulent flow and to determine the lower critical Reynolds number.
9. To study the velocity distribution in a pipe and also to compute the discharge by integrating the velocity profile.
10. To study the variation of friction factor, "f" for turbulent flow in smooth and rough commercial pipes.
11. To determine the loss coefficients for the pipe fittings.
12. To study the flow behavior in a pipe bend and to calibrate the pipe bend for discharge measurement.
13. To study the boundary layer velocity profile and to determine boundary layer thickness and displacement thickness. Also to determine the exponent in the power law of velocity distribution.

STRENGTH OF MATERIALS

Course Code CE-408

CREDIT : 3 (3-0-

0)

Introduction: Brief review, concept of stress, strain, ductility, toughness, elastic constants, hardness, brittleness, tension, compression, shear, Brief review of Mohr's circle for compound stresses & for principal stresses.

Theories of Failure: Various theories of failure and its comparison.

Review of Bending and Torsion: Brief review of bending of beams and shear force & bending moment diagram. Review of torsion of circular shaft and combined bending & torsion. Shearing stresses in beams section.

Deflection of Beams: Deflection of beams, Integration method, Macaulay's method, Area moment method, Unit load method.

Columns and Struts: Theory of columns & Struts, Eulers and Rankine formulae.

Thin Cylinders: Theory of thin cylinders subjected to pressure. Expression for hoop stress and longitudinal stress. Design of thin cylinders.

Thick Cylinders and Spherical Shells: Stresses and strain in thick shells/cylinder subjected to pressures. Compound cylinders press fits on solid shaft.

Fracture, Fatigue and Creep: Stress concentration, Griffith's formula. Fatigue loading, endurance limit, Creep.

References:

1. Strength of Materials by Ryder
2. Strength of Materials by Singer
3. Strength of Materials by Oimoshenko
4. Engg. Mechanics of Solids by Popov
5. Mechanics of Materials by Bear Johnson
6. Strength of Materials by R.K. Rajput
7. Strength of Materials by Ramamrutham & Narain.

MATERIAL SCIENCE & TESTING

Course Code ME-410

CREDIT :4(3-0-1)

In trodution: Historical perspective, importance of materials, Brief review of modern & atomic concepts in Physics and Chemistry. Atomic models, Periodic table, Chemical bondings.

Crystallography and Imperfections: Concept of unit cell space lattice, Bravais lattices, common crystal structures, Atomic packing factor and density. Miller indices. X-ray crystallography techniques. Imperfections, Defects & Dislocations in solids.

Mechanical Properties and Testing: Stress strain diagram, Ductile & brittle material, Stress Vs Strength. Toughness, Hardness, Fracture, Fatigue and Creep. Testing such as Strength testings, Hardness testing, Impact testings, Fatigue Testing Creep testing, Non-destructive testing (NDT)

Microstructural Exam: Microscope principle and methods. Preparation of samples and microstructure exam and grain size determination. Comparative study of microstructure of various metals & alloys such as Mild steel, CI, Brass.

Phase Diagram and Equilibrium Diagram: Unitary and Binary diagrams, Phase rules, Types of equilibrium diagrams: Solid solution type, eutectic type and combination type. Iron-carbon equilibrium diagram.

Ferrous Materials: Iron and steel manufacture, furnaces. Various types of carbon steels alloy steels and cast irons, its properties and uses.

Heat Treatment: Various types of heat treatment such as Annealing, Normalizing Quenching, Tempering and case hardening. Time Temperature Transformation (TTT) diagrams.

Non-Ferrous metals and alloys: Non-ferrous metals such as Cu, Al, Zn, Cr, Ni, etc. and its applications. Various type Brass, Bronze, bearing materials, its properties and uses. Aluminum alloys such as Duralumin. Other advanced materials/alloys.

Magnetic Properties: Concept of magnetism-Dia, para, ferro Hysteresis. Soft and har magnetic storages.

Electric Properties: Energy ban concept of conductor, insulator and semiconductor. Intrinsic & extrinsic semi-conductors, P-n junction and transistors. Basic devices and its application. Super conductivity and its applications. Messier effect. Type I & II Superconductors. High Te Superconductors.

Ceramics: Structure types and properties and applications of ceramics. Mechanical/Electrical behaviour and processing of plastic.

Plastics: Various types of polymers/plastics and its applications. Mechanical behaviors and processing of plastics. Future of plastics.

Other Materials: Brief description of other material such as concrete, wood, glass etc. and its uses.

Performance of materials in Service: Brief theoretical consideration of fracture, Fatigue, Creep and Corrosion and its control.

5. Srivastava, Srinivasan – Science of Materials Engineering Newage.

MATERIAL SCIENCE AND TESTING LAB

A. Material Science Lab Experiments: (at least 5 of the following)

1. Making a plastic mould for small metallic specimen.
2. Specimen preparation for micro structural examination – cutting, grinding, polishing, etching.

ENVIRONMENTAL STUDIES-1

Course Code SES-415

CREDIT 2(2 – 0 - 0)

1: The Multidisciplinary Nature of Environmental Studies.
Definition, Scope and Importance.

(i) Ecosystems.

Concept of an Ecosystem.

Structure and function of an Ecosystem.

Producers, consumers and decomposers.

Energy flow in the ecosystem.

Ecological succession.

Food chains, food webs and ecological pyramids.

Introduction, types, Characteristics features, structures and function of the following ecosystem:

(a) Forest Ecosystem.

(b) Grassland Ecosystem.

(c) Desert Ecosystem.

(d) Aquatic Ecosystem (Ponds, streams, lakes, rivers, oceans, estuaries).

(ii) Social Issues and the Environment

From unsustainable to sustainable development.

Urban problems related to energy.

Water conservation, rain water harvesting, water shed management.

Resettlement and rehabilitation of people; its problems and concerns case studies.

Environmental ethics: Issues and possible solutions.

Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, Case studies

Wasteland reclamation.

Consumerism and waste products.

Environment Protection act.
Air (Prevention and Control of Pollution) Act
Visit to local polluted site-Urban/Rural/industrial/Agricultural.
Study of Common plants, insects, birds.
Study of simple ecosystems-ponds, river. Hillslopes etc(Field work equal to 5 lecture hours).
Issues involved in enforcement of environmental legislation; public awareness.

FOUNDATIONS OF INFORMATION TECHNOLOGY

Course Code COMP-510

CREDIT :5 (2-1-

2)

Fundamental Concept of Information

Information Concept and Processing: Definition of Information, Need of Information, Quality of Information, Value of Information, Concept of Information, Entropy Category and Level of information in Business Organization, Data concepts and Data Processing, Data Representation.

Information Representation: Information Contents, Introduction to information representation in Digital Media, Text, Images, Graphics, Animation, Audio, Video, Elementary concepts in information Preservice, Data compression, Huffman Coding, Shannon Principles, Adaptive Compression, LZW Coding, Images Compression, Introduction to Jpeg, Mpeg, Mheg.

Compute Programming

Computer Appreciation: Definition of Electronic computer, History, Generations, Characteristic and application of computers, classification of computers, RAM/ROM, Computer Hardware, CPU, Various I/O Devices, Peripherals, Storage Media, Software Definition.

Programming Language Classification & Program Methodology: Computer Languages, Generations of Languages, Introduction to 4 GLS, Software Development Methodology, Life Cycles, Software Coding, Testing, Maintenance, Industry Standards, Introduction to ISO, SEI-CMM Standards for IT Industry.

Digital Devices and basic Network Concepts: Digital Fundamentals: Various Codes, Decimal, Binary, Hex Decimal Conversion, Floating Numbers, Gates, Flip Flops, Minimization adder, Multiplexers.

Computer Networks and Communication: Need For Data Transmission Over Distances, Types of Data Transmission, Media for Data Transmission, Networking of Computers-Introduction of Lan and WAN, Network Topologies, basic Concepts in Computer Networks, Client-Server Architecture, Introduction to Advanced Communication Techniques, ISDN, ATM, Token Based Protocol, CSMA/CD, Mobile Communication.

Internet and Web Technologies

Internet & World Wide Web: Hypertext Markup Language, DHJML, WWW, Gopher, FTP, Telnet, Web Browsers, Net Surfing Search Engines, E-mail, Basic concepts in E-Commerce, EDI, Electronic Payments, Digital Signatures, Network, Security, Fireball.

Web Technologies: Elementary Concepts in, Object Oriented Programming, Corba, Com/Dcom, Wireless Application Protocol, ASP Scripting, HTML, Java, Java Applets, WAP, WML, JSP, EJB, XML.

Advanced Concepts in Information Technology:

IT Industry Trends, Careers and Applications in India: Scientific, Business, Educational and entertainment applications, Industry Automation, Weather forecasting awareness of ongoing IT projects in India, NICNET ernet, Application of IT to E Commerce, Electronic Governance, Multimedia, Entertainment.

Suggested Text Books & References:

1. Curtin, "Information Technology: Breaking News", Tm + 1
2. Raja Raman, V. "Introduction to Computers"
3. Bajpai, Kushwaha & Yadav, "Intrduction to Computer & C Programming", New Age.
4. Nelson, "Data Compression", BPB
5. Bharohoke, "Fundamentals of Information Technology", Excel
6. Peter Nortans "Introduction to Computers", TM +1
7. Leon & Leon "Fundamental of Information Technology", Vikas Publishing House

8. Kanter, "managing Information System"
9. Lehngart, "Internet 101", Addison Wesley
10. Cistems "Internet, An Introduction", Tata McGray Hill.

IT LAB

Write Programs in C for the following.

1. Conversion of Binary to Hexadecimal, Decimal to BCD and vice versa
2. LOGIC Designing of gates and flip flops.
3. For Minimization methods
4. Introduction to information representation in digital media text, Images, Graphics, Animations, Audio, Video.
5. Dataflow diagram for generation of Prime Numbers
6. Demonstrate Different Lan Topologies
World Wide Web, File Transfer Protocol, Gopher, Telenet, Web browsers, Search engine, Email Sites
Create your own email address using any of the engines Ex. ID @ engine.com
7. Institutions may add 4 more experiments as per the availability of expertise available with them.

ENGINEERING MATHEMATICS-III

Course Code MAS –590

Credit (3-1-0) 4

1. **Ordinary Y. Differential Difference Equations:** ODE of 2nd order with constant coefficients both homogeneous and non-homogeneous Types with applications to electrical and mechanical systems. Difference equations and their Solutions by z transform. Series solutions of ODE of 2nd orders with variable Coefficients with special emphasis to the differential equations of Legendre, Bessel and Chebyshev. Legendre's polynomials, Chebyshev polynomials and Bessel's functions and Their properties.
2. **Integral Transforms:** Fourier transform and integral Hanker transforms and Hilbert transforms and their Properties, some simple applications. Partial Differential Equations: Linear PDE with constant coefficients of 2nd order and their classifications, PDE of Parabolic, elliptic and hyperbolic type with illustrative examples. Separation of variables Method for solving PDE. Such as two dimensional heat equations, wave equations and Laplace equations.
3. **Functions of a Complex variable:** Analytic (functions, Cauchy- Riemann equations, harmonic functions line integral in the Complex plane, Cauchy's Integral theorem Cauchy's integral formula derivatives of analytic Functions, Liouville's Theorem, fundamental theorem of Algebra representation of a Function by power series, Taylor's series and Laurent's Series, poles, Singularities and Zeros. Residue theorem, evaluation of integrals using Residue theorem. Conformal Mapping, linear fractional transformations, special linear fractional transformations.

Kreyszig, E. (1993): Advanced Engg. Mathematics 7th Edition, John Wiley & sons inc.

Paopoulis: Signal Analysis 3rd Edition (1988) McGraw Hill .

ELECTRICAL MACHINES

Course Code EEE-404

Credit 4(3-0-1)

D.C. Machines: Constructional features and principles of operation of shunt, series and compound generators and motors including EMF equation and armature reaction, Performance characteristics of generators and motors, starting, Speed control and braking of motors. Two Quadrant and Four Quadrant operation of motors, choice of DC motors for different applications, Losses and efficiency.

Transformers:Construction, EMF equation, Principle of operation, Phasor diagram on no-load, effect of load, equivalent circuit, Voltage regulation, Losses and efficiency, Tests on transformers, Prediction of efficiency and regulation, Autotransformers, Instrument transformers, Three phase transformers.

Induction Motors:Rotating magnetic fields, principle of operation, Equivalent circuit, Torque-slip characteristic, Starters for cage and wound rotor type induction motors, Speed control and braking, Single Phase induction motors and methods of starting.

Synchronous Machines:Construction, EMF equation, Effect of pitch and distribution, Armature reaction and determination of regulation of synchronous generators, Principle of motor operation, effect of excitation on line currents (V-curves), methods of synchronization, typical applications of AC motors in industries.

5. Kosow L.L., electrical Machinery and Transformers, PHI
6. Parker Smith, Electrical Engineering Problems, CBS.

MEASUREMENT & METROLOGY

Course Code (ME-405

Credit4(2-1-1)

1. Mechanical Measurements

Introduction: Introduction to Measurement and Measuring instruments, Generalized Measuring system and functional elements, units of Measurement, static and dynamic performance characteristics of Measurement devices, calibration, concept of error, sources of error, statistical analysis of errors.

Sensors and Transducers: Types of Sensors, types of transducers and their characteristics.

Time and Transducers: Counters, Stroboscope, frequency measurement by direct comparison

Measurement of pressure: Gravitational, direct acting, elastic and indirect type pressure transducers. Measurement of very low pressures.

Measurements of Force and Torque: Different types of load cells elastic transducers, Pneumatic & Hydraulic systems.

Temperature Measurement: By thermometers, bimetallic, thermocouples, thermostats and pyrometers. **Vibration and Noise Measurement**

Seismic instruments, vibration pick ups and decibel meters, vibrometers accelerometers.

Data Acquisition system: Introduction to data acquisition systems, single and multi-channel system, microprocessors and PC based data acquisition systems. Input-output devices.

Signal Transmission and Processing: Devices and Systems.

METROLOGY

II. Metrology and Inspection: Standards of linear measurement, line and end standards. Limit, fits and tolerances. Interchangeability and standardization.

Linear and angular measurements devices and systems.

Limit gauges classification, Taylor's Principle of Gauge Design.

Measurement of geometric forms like straightness, flatness, roundness and circularity.

Tool makers microscope, profile project autocollimator.

III Interferometer: principle and use of interferometry, optical flat and interferometers, laser interferometers. Measurement of screw threads and gears.

Surface texture: quantitative evaluation of surface roughness and its measurement.

KINEMATICS OF MACHINES

Course Code ME-407

Credit 4(3-1-0)

0)

1. **Introduction:** Links, kinematics pairs, linkage mechanisms, inversions of slider crank chain and double slider crank chain, four bar linkage, mechanisms compound chains in brief.
2. **Velocity and Acceleration I Mechanisms:** Velocity of point in mech., relative velocity method, instantaneous center method, Kennedy's theorem acc-diagram, acc-centers, Coriolis components acc., Klein's construction for slider crank and four bar mech. Analytical method for slider crank mech.
3. **Mechanism with Lower Parts:** Pantograph straight line motion mechanisms, Peucellier's Mechanism, hart's straight line mech., Scott Rusel mech., analysis of hook's joint, introduction to the analysis of complex mech., Davis and Ackermann steering gears.
4. **Kinematic Synthesis of Planner Linkages:** Linkages, geometrical methods, 3 position synthesis of coupling rod, analytical method, fredenstem equation for functions generation.
5. **Cams:** Classification & terminology law of gearing, geometric & kinematic characteristic of involute, under cutting & interference, gear trains (simple, compound & planetary)

Books & reference:

1. Theory of Machines Thomas Bevan
2. Theory of Machines and Mechanisms-Shigley.
3. Theory of Machines and Mechanisms – Ghosh and Mullick
4. Theory of Machines & mechanism – Dukhipati.

INDUSTRIAL ENGINEERING

Course Code ME-411

Credit 4(3-1-0)

1. **Productivity:** Introduction, definition, measurement, productivity index, ways to improve productivity.
2. **Work study:** Meaning and benefits of work study, time and motion study Micromotion study P.M.T.S. man machine Diagram flow chart. Motion economy, Method study, work measurement, work sampling standard time.
3. **Job Evaluation & Merit Rating:** Job analysis, job description job simplification and job evaluation methods & description, merit rating, wage incentive plans.
4. **Plant layout and Materials Handling:** Plant location type of layout, principles of facility layout principles of material handling, Material handling empts.

5. **Production Planning and Control:** Objectives, function, steps in PPC. Planning routine, scheduling, Dispatching & Follow-up, Effectiveness of PPC.
6. **Replacement Analysis:** Depreciation causes, obsolescence, service life of assets, Replacement of items.
7. **Inventory Control:** Inventory, function, cost, deterministic models.
8. **Introduction to MRP & JIT quality control:** Introduction, process control, Control Charts, Single double and sequential sampling, Introduction to TQM & bench marking.
9. **Organization:** Principles of organization, Development of Organizational charts like line, staff, line and staff & functional types.
10. **Industrial Ownership:** Proprietorship, partnership, Joint stock & co-operative stores.
11. **Manpower Planning:** Resources, Human relationship.
12. **Factory Legislation India:** Factory acts, payment of wages, workmen compensation, E.S.I. Sales management & forecasting cost accounting, Budgetary control.
13. **Project management & CPM/PERT:** Methods of drawing networks and computations of various times, updating resources a location, project management.
14. **Break Even Analysis:** Introduction, Assumption, Stepsion BEA, purpose, fixed & variable costs, margin of safety, Angle of incidence profit volume graph.
15. **Operation Research:** Brief outlines of problems, linear programming, transportation problems. Graphical methods.

6. Industrial Engineering by Mahajan.

MANUFACTURING SCIENCE -1

**Course Code (ME 412)
0-1)**

Credit 4(3-

Introduction:

Importance of manufacturing, economic & Technological consideration in manufacturing. Survey of Manufacturing Process. Materials & manufacturing process for common items.

Metal Forming Process:

Elastic & Plastic deformation, yield criteria. Hot working Vs cold working, Load required to accomplish metal forming operation.

Analysis (equilibrium equation method) of forming process with sliding friction sticking friction and mixed condition for slab and disc. Work required for forging.

Analysis of Wire/Strip drawing and max. Reduction, Tube drawing, Extrusion and its application

Condition for rolling force and power in rolling. Rolling mills.

Design, lubrication and defects in metal forming processes.

Sheet Metal Working:

Die & assembly and press work methods and processes. Cutting mechanism, blanking Vs piercing.

Compound Vs. progressing die. Flat faces Vs inclined face punch.

Analysis of forming process like cup/deep drawing and bending.

Unconventional Metal Forming Processes:

Unconventional Metal forming Processes such as explosive forming, electro-magnetic, electro-hydraulic forming.

Powder Metallurgy:

Powder metallurgy manufacturing processes. The process, advantage and applications.

Casting:

Basic principle & survey of casting Process. Types of patterns and allowances. Types and properties of moulding sand. Element of mould and design considerations, gating, riser, runner, core. Solidification of casting, theory and analysis. Sand casting, defect and remedies and inspection. Cupola furnace. Die casting centrifugal casting, Investment casting.

Manufacturing Of Plastic Components:

Plastic and its past, present & future uses. Injection moulding. Extrusion of plastic section. Welding of plastics. Future of plastic & application.

Jigs & Fixtures:

Locating and clamping devices/principle. Jigs and fixtures and its application.

Books:

1. Manufacturing science by Ghosh and Mallik.
2. Production Engg. Science by P.C Pandey
3. Production technology by R.K.Jain.
4. Manufacturing technology by P.N.Rao
5. Material and manufacturing by Paul Degarmo.

MANUFACTURING SCIENCE-1 LAB

EXPERIMENTS:

Say Minimum 8 Experiments out of Following (Or Such Experiment)

1. Design of pattern for a desired casting (containing hole).
2. Pattern making.
3. Making a mould (with core) and casting.
4. Sand testing (at least one such as of grain fineness number determination).
5. Injection moulding of plastic.
6. Forging by hand forging processes.

MANAGEMENT INFORMATION SYSTEM

Course Code ME 416

Credit 3(3-0-0)

Part I: Organizations, Management and the Networked Enterprise Information Systems in Global Business Today

Global E-Business: How Businesses Use Information Systems Information Systems, Organizations, and Strategy Ethical and Social Issues in Information Systems

Part II: Information Technology Infrastructure IT Infrastructure and Emerging Technologies

Foundations of Business Intelligence: Databases and Information Management

Telecommunications, the Internet and Wireless Technology Securing Information Systems

Part III: Key System Applications for the Digital Age

Achieving Operational Excellence and Customer Intimacy: Enterprise Applications

E-Commerce: Digital Markets, Digital Goods Managing Knowledge Enhancing Decision Making

COMPUTER BASED NUMERICAL & STATISTICAL TECHNIQUES

Course Code (MAT-491)

CREDIT 3 (3-1-1)

Introduction: Errors in Numerical Computation, Mathematical Preliminaries, Errors and their Analysis, Machine Computations, Computer Software.

Algebraic & Transcendental Equation: Bisection Method, Iteration Method, Method of False Position, Rate of Convergence, Method for Complex Root, Muller's Method, Quotient Difference Method, Newton Raphson Method.

Interpolation: Introduction, Errors in Polynomial Interpolation, Finite Differences, Decision of Errors, Newton's Formulae for Interpolation, Gauss, Stirling, Bessel's, Everett's Formulae, Interpolation by Unevenly Spaced Points, Lagrange's Interpolation Formula, Divided Difference, Newton's General Interpolation Formula.

Curve Fitting, Cubic Spline & Approximation: Introduction, Method of Least Square Curve Fitting Procedures, Fitting a Straight Line, Curve Fitting by Sum of Exponentials, Data Fitting with Cubic Splines, Approximation of functions.

Numerical Integration & Differentiation: Introduction, Numerical differentiation, Numerical Integration, Trapezoidal Rule, Simpson 1/3 Rule, Simpson 3/8 Rule, Boole's and Weddle's Rule, Euler—Maclaurin Formula, Gaussian Formula, Numerical Evaluation of Singular Integrals.

Statistical Computation: Frequency Chart, Regression Analysis, Least Square Fit, Polynomial Fit, Linear & Non Linear Regression, Multiple Regressions, Statistical Quality Control Methods.

References:

2. Balaguruswamy, "Numerical Methods", TMH.
3. Sastry, "Introductory Method of Numerical Analysis", PHI.
4. Gerald & Wheatly, "Applied Numerical Analysis", Addison Wesley.
5. Probability & Statistic, Schaum Series.
6. Hulquit, "Numerical Method for Engineers & Computer Scientist", Addison Wesley.
7. Flowers, "Numerical Methods In C++", Oxford University Press.
8. Vedamurthy, "Numerical Methods", Vikas.

List of Experiments:

Write Programs in C

1. To deduce errors involved in polynomial Interpolation.
2. Algebraic and transcendental equations using Bisection, Iterative method of false position, also give rate of conversions of roots in tabular form for each of these methods.
3. To implement Bessel's functions, Newton's, Sterling, Languages.
4. To implement method of least square curve fitting.
5. Implement numerical differential using trapezoidal, Simpson 3/8 rules.
6. To show frequency chart, regression analysis, Linear Square fit and polynomial fit

ELEMENTS OF ECONOMICS AND PRINCIPLES OF MANAGEMENT SCIENCE

Course Code (BAM-315)

CREDIT 4(3-1-0)

Industrial Economics;

1. **Introduction:** -Nature and significance of economics, meaning of science, Engineering and technology and their relationship with economic development.
2. **Basic concept:** - The concept of demand and supply, indifference curve analysis, price effect, income effect and substitution effect.
3. **Money and banking:** - Function of money, value of money, inflation and measure to control it. Brief idea function of banking system, viz; commercial and central banking, business fluctuation.

Management:

4. **Introduction:** Definition, nature and significance of management, evaluation of management thought, contribution of Max Weber, Taylor and Fayol.
5. **Human behaviour:** Factors of individuals' behaviour, perception. Learning and personality development, inter personal relationship and group behaviour.

References:

4. Dewett, K.K./Modern Economics Theory.
5. Luthers, Fred / Organizational Behaviours.
6. Prasad L.M/ Principles of Management
7. A.W. Stonier &D.C Hergne/ A Text Book of Economics Theory /Oxford Publishing House Pvt Ltd

MACHINE DESIGN – I

Course Code (ME-409)
0-2)

Credit4(2-

Introduction, Definition, Methods, Standards in design & selection of preferred size Selection of materials, BIS system of designation of steels, steel & alloys, plastics & rubbers.

Design against static load

Modes of failure, Factor of safety, stress-strain relationship, principal stresses, theories of failure, endurance limit, design for finite & infinite life, Soderberg & Goodman criteria

Design against Fluctuating Load

Joints Riveted joints, welded joint, screwed joints, eccentric loading of above joints, design for fatigue loading.

Shaft, Keys & coupling.

Design against static load, strength & rigidity design, design of square & flat keys & splines, rigid & flexible couplings.

Mechanical Springs.

Helical spring, stress equation, deflection equation, design against static & fatigue loading, Multileaf spring, Nippling, Design, spiral springs.

Power Screws

Form of threads, square threads, trapezoidal threads, stresses in screw, design of screw jack.

Reference:

1. Machine design: Sharma & Agarwal, Kataria
2. Design of M/c Elements: Bhandari TMH
3. M/c Design : Maleev & Hariharan
4. Machine Design SI edition by Shigley, McGray Hill
5. Machine Design by black & Adams, McGray Hill
6. Design of machine elements by Sprots.

MECHINE DESIGN – I LAB

1. Design & drawing of Riveted joints for given operating conditions
2. Design of an eccentrically loaded welded, riveted or bolted joint
3. Design of bolted joint for fluctuating loads
4. Design & drawing of a cotter joint.
5. Design & drawing of a Knuckle joints.
6. Design & drawing of a simple screw jack
7. Design of shaft for different loading conditions
8. Design & drawing of rigid coupling (flanged type)
9. Design & drawing of a flexible coupling (pin-bush type)
10. Design & drawing of a leaf spring for and automobile
11. Design & drawing of a helical spring for a given application

Note-

1. Students may be advised to use design data book for design
2. Drawing shall be made wherever necessary on small drawing sheets

HEAT & MASS TRANSFER

Course Code (ME-503)

Credit 4(3-0-1)

General: Modes of heat transfer Conduction Convection- Radiation, scope and application of heat transfer, principles in Engineering Practice.

Conduction: Fourier law-Thermal conductivity of solids, liquids and gases, factors affecting thermal conductivity General differential equation for conductions. One dimensional steady state conduction through homogeneous and composite surface-Plane, cylindrical and spherical walls- Effect of variable thermal conductivity Shape factor, Overall heat transfer coefficient-Critical radius of insulation solution of multi dimensional steady state problems using relaxation method. Transient heat conduction based on lumped parameter method.

Convection: Principles of dimensional analysis-pi theorem, Application of dimensional analysis to free and forced convection. Empirical relations for flat plate and tubular geometry. Forced convection from tubes & tube bundles in cross flow. Simple application to straight, rectangular and triangular fins effectiveness of fins. Fundamentals of boiling heat transfer, pool boiling, Heat transfer in condensation: drop wise and film condensation: empirical equations.

Radiation: Nature of thermal-radiation-Definitions and concepts Monochromatic and total emissive power-Absorptivity – Reflectivity-Black, gray and real surfaces-concept of a black body-Planck's distribution law-Configuration of geometrical factor Heat exchange by radiation between black surfaces-Large parallel black plates, equal parallel and opposite black squares, black rectangles perpendicular to each other having a common edge-heat exchange by radiation between large parallel planes of different emissivity. Radiation shields Electrical network method of solving radiation problems. Solar radiation & Collectors.

Heat Exchangers: Tubes of heat exchangers- Parallel flow, Counter flow evaporator and condenser, Log mean temperature difference, effectiveness, NTU method, Introduction to compact heat exchangers.

Ficks law of diffusion, Diffusion coefficient, steady state diffusion through stationary media, steady state diffusion through a stagnant gas films, steady state, equivocal counter diffusion.

References:

2. Fundamental of moment and heat transfer-Wetly
3. Heat and mass Transfer – Eckert & Drake, McGraw Hill Book Co.
4. Engineering Heat Transfer J.P. Homan, McGraw Hill Book Co.
5. Heat Transfer by Pitts and Sission, Schaum series.
6. Heat Mass Transfer by R. Yadav
7. Heat Mass Transfer by C.P.Gupta
8. Heat and Mass Transfer by Domkundvar
9. Heat & Mass transfer by R.C. Chandra
10. Heat & Mass Transfer by Vijay Gupta
11. Heat & Mass Transfer by D.S. Kumar

HEAT & MASS TRANSFER –LAB

- 1- Conduction- Composite wall experiment
- 2- Conduction- Composite cylinder experiment
- 3- Convection- Pool Boiling experiment
- 4- Convection- Experiment on heat transfer from tube-natural convection.
- 5- Convection- Heat Pipe experiment

- 6- Convection- Heat transfer through fin-natural convection.
- 7- Convection- Heat transfer through tube/fin-forced convection.
- 8- Any experiment- Such as on Stefan's Law
- 9- Any experiment on radiation-Such as on solar collector.
- 10-Heat exchanger- Parallel flow experiment
- 11-Heat exchanger- Counter flow experiment
- 12-Any other suitable exp. Such as on critical insulation thickness.

DYNAMICS OF MACHINES.

Course Code (ME-504)

Credit 4(3-

0-1)

1. **Force Analysis. Turning moment & Fly Wheel:** Static force analysis of linkages, Equivalent offset inertia force, Dynamic analysis of slider crank and 4 Bar mechanism. Piston and crank effort, inertia, torque Turning moment diagrams, fluctuation of energy, fly wheel.
2. **Balancing of Machines:** Static and dynamic balancing, balancing of rotating and reciprocation masses, Primary and secondary forces and couples.
3. **Friction:** Pivot and collar friction, friction circle, single plate, multiple and cone clutches, centrifugal clutches, Michele & Kings burros thrust bearing and rolling contact bearing, Belts and pulleys, flat and V-Belts, design and selection.
4. **Brakes and Dynamometers:** External and internal shoe brakes, band and block brakes, hydraulic brakes, and absorption and transmission dynamometers.
5. **Governors:** Dead weight and spring loaded governors, sensitivity, stability, hunting, isochronism's, effort and power, friction and insensitivity, gyroscopic couple and rection.
6. **Gyroscopic Motion:** Principles, Gyroscopic acceleration, gyroscopic couple and reaction.
7. **Mechanical Vibration:** Single degree free & forced, undamped and damped vibrations, Critical speeds.

Book & Preferences

1. Theory of Machines: Thomas Bevan (ELBS/CBS pub., New Delhi)
2. Theory of Machines: S.S. Rattan (TMH)
3. Mechanisms & Dynamic of Machines- Mabie
4. Theory of machines: Shinglay
5. Theory of machines – R.K. Bansal (Laxmi Publication)
6. Mechanisms and Machine Theory – A.K. Ambekar Jain Bros.
7. Theory of Machines – W.T. Green
8. Mechanism & Machine Theory- Rao & Dukhipati (New Age)
9. Theory of Machine and Mechanism- Ghsoh & Mullick
10. Theory of Machines – P.L. Ballaney (Khanna Pub.)

PRODUCT DEVELOPMENT & DESIGN

Course Code (ME-506)

Credit 3(2-1-0)

Product, Definition, Scope, Terminology: Design definitions, Old and new design methods, design by evolution, examples such as evolution bicycle, safety razor etc. Need based developments, Technology based developments, Physical reliability & Economic feasibility of design concepts.

Morphology of design, Divergent, transformation and convergent phases of product design, Identification of need, Analysis of need.

Design for what? Design, criteria, functional aesthetic, ergonomics, form, shape, size, colour.

Mental blocks, Removal blocks, Ideation techniques, creativity, checklist, transformations, brain storming and synerics, Morphological techniques.
Utility concept, Utility value, Utility index, Decision making under multiple criteria. Economic aspects fixed and variable costs, Break-even analysis.
Reliability considerations, Bath tub curve, reliability of systems in series and parallel, failure rte, MTTF and MTBF, Optimum spares from reliability considerations.
Design of displays and controls, Man-machine Interface, compatibility of displays and controls
Ergonomic Aspects, Anthropometrics data and its importance in design.
Application of Computers in product design.

Book References:

1. Product Design & Manufacturing – A.K. Chitai & R.C. Gupta, PHI (EEE)
2. The Technology of Creation Thinking- R.P. Gewford- Ph.D.
3. The Art of thought- Grohem Wallas- Brev & Co., New York.
4. Product Design & Dection Therory – M.K. Starr, PH
5. Engg. Product Design – C.D. Lain, Business Book
6. Industrial Design for Engineers – W.H. Mayall Hiffe
7. Human Factor Engg. – Mccormic E.J., McGraw Hill
8. Engineering, An Introduction to creative Profession- G.C. Beabley & HW Leach, Mc Millan

MANUFACTURING SCIENCE – II

Course Code (ME-507)

Credit4(3-0-1)

Metal Cutting and Machine Tools Metal Cutting

Lathe: Principle, types, operations, Turret/Capstan, Semi/Automatic, Tool layout. Shaper, slotter planer: Operation, drive.

Milling: Milling cutter, Up & Down milling, Dividing head, indexing. Max chip thickness, power required.

Drilling and boring: Drilling, boring, reaming tools. Geometry of twist drill

Grinding: Grinding wheel, abrasive, cutting action. Grinding wheel specification. Grinding wheel wear attritious wear, fracture wear. Dressing and trueing. Maxchip thickness and Guest criteria. Flat and cylindrical grinding. Centerless grinding. Super finishing: Honing, lapping, polishing. Metal Joining

Welding :

Survey of welding and allied processes. Gas welding and cutting, process and equipment. Arc welding: Power sources and consumables. TIG & MIG processes and their parameters. Resistance welding- spot, seam projection.

Other welding processes such as atomic hydrogen, submerged are, electroslag, friction welding.

Thermodynamic and Metallurgical aspects in welding and weld. Shrinkage/residual stresses in welds. Defects in weld and remedies. Weld decay in HAZ.

Non conventional Machining and Non-conventional Welding

Benefits, application and working principles of non-conventional machining process. Introduction to Non-conventional Machining and welding (EDM,ECM, LBM, EBM, USM, AJM) similarly, non-conventional welding processes such as LBW, USW, EBW, Plasma arc welding, explosive welding.

Books:

1. Manufacturing science by Ghosh and Mullick
2. Fundamentals of Metal Cutting and Machine Tools by Boothroyd
3. Production Technology, by R.K. Jain
4. Production Technology-HMT
5. Production Engineering Science by P.C. Pandey
6. Modern Machining by P.C. Pandey
7. Manufacturing by Degarmo
8. Fundamentals of metal cutting & machine tools- Juneja & Shekhoin
9. Process & materials of manufacturing- Lind burg
10. Advanced machining process by V.K. Jain

MANUFACTURING SCIENCE –II LAB

1. Shear-angle determination (using formula) with tube cutting (for orthogonal) on lathe machine.
2. Bolt (thread) making on Lathe machine
3. Tools grinding (to provide tool angles) on tool-grinder machine.
4. Gear cutting on milling machine.
5. Machining a block on shaper machine.
6. Finishing of a surface on surface-grinding machine.
7. Drilling holes on drilling machine and study of twist-drill
8. Study of different types of tools and its angles & materials.
9. Experiment on tool wear and tool life
10. Experiment on jigs/Fixtures and its uses
11. Gas welding experiment
12. Arc welding experiment
13. Resistance welding experiment
14. Soldering & Brazing experiment
15. Experiment on in conventional machining
16. Experiment on unconventional welding
17. Experiment on TIG/MIG Welding
18. Macro and microstructure of welding joints, HAZ.

I.C. ENGINES

CourseCode:ME508

Credit 4(3-1-0)

Introduction: Review Classification, Application, Constructions details, Working principle, Valve timings, Environment friendly engines. List of auxiliary system.

Gas Cycle & Processes: Review of Otto, Diesel and Dual Cycles, Comparison, Sterling and Bryaton Cycle, Improvement of Performance by modification of gas turbine cycles, Fuel air cycle, Actual cycle.

Combustion in SI & CI Engines: Stiochiometric air fuel, Combustion theory, Combustion phenomena. Engine variables on ignition delay and flame Speed Abnormal Combustion, Detonation or Knock, Variable affecting knock, Effects of knock, Methods to reduce detonation, Combustor chambers design.

Fuels for I. C. Engine: Types, Chemical Structure, Petroleum refining process, Properties of SI, CI and aviation fuels, Knocking rating of SI and CI fuels, Non- petroleum fuels, Alternative fuels for I.C engine. Stiochiometric air – fuel ratio.

Carburetion and gasoline Injection: Intake and exhaust system, Engine air-fuel requirement, Simple carburetor, Complete carburetor and its elements, Types, Fuel pump, Fuel system, Multi-point fuel injection system. Governing of SI engines.

C.I. Fuel Injection System: Requirements of injection system, Types, Injection pump, Governing, Fuel injector, Injector nozzle.

Ignition System: Requirements, Types – Battery and Magneto ignition system, Spark plug, Contact breaker, Dual angle, Firing order, Spark advance mechanism, Electronic ignition systems

Engine Friction and Lubrication: Total engine friction, Factors affecting engine friction, Lubrication, Mechanism of lubrication, Lubricants and their properties, Additives, Lubrication systems.

Engine Cooling System: Necessity of cooling, Heat transfer and energy balance, Parameters affecting engine heat transfer, Cooling system.

Supercharging : Objective, Methods, Turbocharger, performance.

Two- stroke Engines: Classification, Scavenging processes, advantages and disadvantages, Performance.

Measurement, Testing & Performance: Performance parameters, Type of tests – speed fuel and air consumption, friction, Indicated and brake power, Performance characteristics, Heat balance sheet.

Air Pollution and Control: Sources and classification, Effects of air pollution, Pollutants from I. C. engines, Mechanism of formation of pollutants, Particulate emissions, Exhaust gas treatment.

References:

1. I.C. engine Analysis and practice –E.F. obert
2. A Course in internal combustion engines –M.L. Mathur & R.P. Sharma, Dhanpat, Rai & sons, New Delhi.
3. Internal combustion engines- Maleev
4. Heat Engg.-Vasandani & Kumar
5. Internal Combustion Engine-Gill and Smith
6. Internal combustion Engines and Air Pollution- R. Yadav, CPH, Allahabad
7. I.C. Engines by V. Ganesam, TMH
8. Internal combustion Engine- Heywood, Mc-Graw Hill

TOOL DESIGN

Course Code (ME-501)

Credit: 4(3-0-

1)

1. Broad classification of Tools-cutting tools. Dies. Holding and measuring tools

2. **Design of cutting tools :** Single point and multipoint cutting tools .

Single point cutting tools : Classification. Nomenclature . geometry . design of single point tools for Shapers . planers . etc. Chip breakers and their design.

Multipoint Cutting Tools :Classification and specification. Nomenclature. Design of drills , milling cutters Broaches, taps etc.

Design of form tools : Flat and circular form tools, their design and application.

3. **Design of Dies :** Classification of Dies , Design of Dies for bulk metal deformation , - wire drawing , Extrusion, Forging and Rolling . Design of Dies for sheet metal , Blanking and Piercing . Bending and Deep drawing . Design of Dies for Casting and Moulding . Power Metallurgy die design .

4 **Design of Jigs and Fixtures :** Classification of Jigs and Fixtures , Fundamental Principles of design of jigs and fixtures, Location and clamping in jigs and fixtures , Simple design of drilling jigs, milling fixtures , etc. indexing jigs and fixtures .

MACHINE –DESIGN- II

Course Code (ME-505)

Credit 4(3-0-

1)

Spur gears: Conjugate action, involute gears, gear cutting methods, tooth loads, strength of spur gears I bending and in wear, dynamic loading, gear materials, design of gears in volute spines gear corrections.

Helical Gears: Tooth relation ship, tooth proportions design of the helical gears, crossed helical gears.

Worm gears: Types of worm gearing, analysis of forces, power rating efficiency, worm gear standers and proportions.

Bevel gears: Straight bevel gears, design for bending, wear and dynamic loading, spiral bevel gears, hypoid gears.

Antifriction bearing: Types of ball bearing, roller bearing, needle roller bearing, friction life of bearing, reliability considerations, selection of ball bearing, roller bearing, tapered roller bearings, thrust bearing, lubrication and sealing. Mounting of bearings,

Lubrication and sliding bearing: Type of lubrication, viscosity, hydrodynamic theory of lubrication, types of bearing, design of bearing using design charts, boundary lubrication, hydrostatic bearing, hydrodynamic thrust bearing.

Engine Parts: Design of the connecting rod, cross-head, crank shaft and piston, valve gear mechanism.

References:

2. Design of machine members- alex Valance V.I doughtie, Mg-graw Hill Co.
3. Machine design D.N. Reshetov, Mir Publishers: Mosow.
4. Machine design D.N. Reshetov, Mir Publisher: Mosow.
5. Fundamentals of Machine design [Vol: 1-5] Porlov, ir. Pun: Mocow
6. Machine elements: Dobrovsky, Mir, Pub. Moscow data books
7. Fundamentals of Machine design-Rechard M. Phelan, Tata-McGraw Hill Pu. [1978]
8. Machine Design-Maleev and Hartman, CBS.
9. Machine Design –Sharma & Agrawal, Kataria
10. Design of Machine Elements – Bhandari TMH
11. Machine Design- Black & Adams, Mc Graw-Hill

MACHINE DESIGN – II LAB

At least 2 experiments/turns (lecture-classes) from each of the 4 following sections, say, 3 turns for A, 3 turns for B, 2 turns for C and 2 turns of D, total 10.

A. Conventional Design & Drawing-

Conventional design & drawing on small drawing sheet using hand book for items such as engine parts, shafts, gears, bearings etc. by students.

B. Computer and Language-

Lectures should be given by teachers on introduction to computer and languages such as C/Input Out put statements, control statements, if, for while, switch statement etc. Function and its uses.

Structure. To make student able to write computer program.

C. Writing computer programme for conventional design-

After section B, students can write compute program for the design done in section A/ theory subjects.

D. Auto CAD-

With initial review teaching of Auto CAD, students can do drawing & drafting of design done in section A.

PROJECT MANAGMENT

Course Code (ME509)

Credit 3(2-1-0)

Project management concept, establishing the project and goals; organizing human resource and contracting; organizing systems and procedures for implementation; project direction, coordination and control, project management performance; project management case studies, project management information system; computer based project management; future of project management.

Development of Project Network:

Time estimation, determination of critical path (CPM) Event slacks and floats, choice of schedule in view of resource constraints. Programme evaluation review technique (PERT) examples. Illustrations & case studies.

Misc. Topics:

Introduction to MRP? ERP, TQM and E-commerce etc.

REFERENCE:

1. Project management-Kerzner, CBS.
2. Essentials of project management-Dennis Lock, Groover,
3. Projects-planning, analysis, selection, impletation & review -P, Chandra,TMH
4. Project management Basic-R.L.Kimmons, Dekker.
5. System analysis & Project management - Cleland & kind McGraw hill.
6. Practical Project management - RG Ghattas & Sandra L. Mckec, Pearson Education Asia.

AUTOMATIC CONTROLS

Course Code (EEE-509)

Credit 3(2-1-0)

Introduction :Concept of automatic controls-loop and closed-loop systems, servomechanisms, block diagrams, transfer functions. Application of Laplace Transform in control system.

Representation of control components and systems:

Translation and rotational mechanical components, electrical components, series and parallel combinations, cascade systems, analogous system.

System Response: First and second order systems response to impulse, ramp and sinusoidal inputs, properties of unit step response of second order system, systems with velocity lag.

Mode of Controls: Proportional control-proportional pus reset control proportional plus rate control, reset rate, two position control.

Controller Mechanisms: Pneumatic, hydraulic and electric controllers, general principles for generating various control actions. Concept of control value.

Control system analysis: Transient response of simple control systems stability of control system Routh's criterion.

Frequency response analysis: Polar, Bode plots-experimental determination of frequency response, Bode and Niquist stability criteria, gain and phase margins.

Root locus plots: Simple transfer functions transient response from root locus.

References:

5. Control systems Engineering- I.J. Nagarth and M. Gopat New Age Pvt. Ltd.
6. Automatic Process Control- D.P. Eckaman, Viley Eastern Ltd.

QUALITY ENGINEERING**Course Code ME-510****Credit : 4 (3-0-1)**

1. Concept of quality , basic statistical concept , Control of accuracy and precision , Process capability , standardization and interchangeability , Statistical quality control : Objectives , Applications , Organization , Cost Aspects, theory of statistical tolerance.
2. Control Charts : General theory of control charts , Group control chart , Shewhart control chart for process control; control charts for variables such as \bar{X} , R , Control charts for attributes such as c and p charts , Acceptance control chart ; Cumulative sum control charts ;
Subgroup selection ; Process capability , Cause – effect and pareto diagrams
3. Acceptance Sampling :Multiple and Sequential sampling plans , Multi-Continuous sampling Plans, Acceptance Sampling by variables , Advantages Limitations , Sampling plans using different Criteria , Comparison of various types of sampling plans , Rectifying Inspection .
4. Reliability , Availability and maintainability : Introduction to reliability , Bathtub curve , series and parallel system ; MTBF , Evaluation of Availability and Maintainability .
5. Quality Design : Design of experiment concept , System , Parameter and Tolerance Design ; concept of robust design , Taguchi Concept - Orthogonal arrays and S/N ratio

Reference Books:

1. Quality Control and Introduction Statistics – Duncan A. J.
2. Introduction to Quality Control – C.O.P. applications
3. Statistical Quality Control by Grant andv Leavarworth .
4. Maintenance for reliability by Rao .

ENERGY MANAGMENT**Course Code ME-516****Credit : 4 (3-1-0)**

1. Introduction : The energy-economy link. Patterns of energy use in developing countries, the electricity-economy link for developing economies, options to overcome the energy crisis. Characteristics of conventional and non-conventional energy resources.

2. Conventional energy resources and their utilization; thermal, nuclear and hydro-electric power plants, use of diesel engines and gas turbines for power generation. Combined cycles for efficient power generation.
3. Non-conventional energy resources and their utilization: solar , geothermal, wind, wave, biomass and ocean-thermal energy conversion and their limitations. Energy storage techniques.
4. Energy conservation: energy auditing, process energy and gross energy requirement, energy recovery: insulation, heat recovery heat exchangers, heat-pumps, combined heat and power plants (cogeneration), efficient lighting and energy conservation in buildings.
5. Environmental aspects of energy resource utilization: combustion generated air pollution, global warming, acid rain, fly ash disposal, radioactive pollution and nuclear waste disposal.

FLUID MACHINERY

Course Code (CE-576)
1-1)

Credit 4(2-

- 1. Jet Theory:** Introduction to hydro dynamic thrust of a jet on a fixed and moving surface (flat, curve), effect of inclination of jet with the surface.
- 2. Hydraulic Turbines:** Pelton Wheel, Francis and Kaplan turbines classification of turbines, working principles, work done, efficiency, draft tube theory, cavitations in turbines, performance, testing of turbines, model testing, selection of a turbine, stability of a turbine (Static & dynamic), performance curves, constant efficiency curves, Muschel curves, governing of turbines, specific speeds.
- 3. Pumps:** Centrifugal pumps, classifications, work done by impeller, efficiencies of centrifugal pumps, priming, specific speed, cavitations and separation, surging, checking, model testing, performance characteristics, reciprocating pumps, classification, work done (single and double acting), slip, variation of pressure, work saved by fitting air vessels, multicylinder pumps, comparison of centrifugal and reciprocating pumps, design aspects.
- 4. Hydraulic machines:** Hydraulic systems, hydraulic press, cranks, jacks, accumulator, intensifier, ram, fluid coupling, fluid torque converter, water hammer, jet pumps and air lift pumps.
- 5. Gas Turbines and Jet propulsion:** Introduction, working cycle, different types of gas turbines, jet propulsion, thrust power and propulsion efficiency.

References:

1. Hydraulic Machines Dr. J. Lal
2. Heat Engg. V.P. Vasandani & D.S. Kumar
3. Hydraulic machines V.P. Vasandani
4. Fluid machinery- K.R. Arora
5. Fluid machinery – P.N. Modi & S.M. Seth.

FLUID MACHINERY LAB

Say minimum eight experiment following or such experiment

1. Impact of jet experiment
2. Turbine exp. On pelton wheel
3. Turbine exp. On Francis turbine
4. Turbine exp. On Kaplan turbine
5. Exp. On Reciprocating pump
6. Exp. On centrifugal pump.
7. Exp on Hydraulic Jack/Press
8. Exp. On Hydraulic Brake
9. Exp. On Hydraulic Ram
10. Study through first visit of any pumping station/plant
11. Study through second visit of any pumping station/ plant
12. Any other suitable experiment/test rig such as comparison & performance of different types of pumps and turbines.

DESIGN AGAINST FATIGUE AND FAILURE CREDIT

Course Code ME-518

Credit 4 (3-1-0)

A. FRACTURE OF CRACKED MEMBERS

1. INTRODUCTION :

- (1) Cracks as stress raisers
- (2) Behavior at crack tips in real materials
- (3) Effects of cracks on strength
- (4) Effect of cracks on brittle versus ductile behaviors

2. MATHEMATICS CONCEPT OF

- (1) Strain Energy release rate ratio , G .
- (2) Stress intensity factor K .

3. APPLICATION OF K TO DESIGN & ANALYSIS

- (1) Mathematical form used to express K
- (2) Cases of special interest for practical application
- (3) Discussion

4. Fracture toughness values and trends

- (1) Trends of K_{IC} with materials
- (2) Effects of temperature and loading rates
- (3) Micro structural influences on K_{IC}

5. Plastic zone size and plasticity limitation on LEFM

- (1) Plastic zone size for plane stress
- (2) Plastic zone size for plain strain
- (3) Plasticity limitation on LEFM

6. Standard Test Methods for

- Fracture Toughness Testing
- Effect of thickness on Fracture behaviour

COMPUTER AIDED DESIGN

Course Code (ME-601)

Credit 5(3-

0-2)

1. Introduction: Introduction to CAD / CAED / CAE and its engineering applications, importance & necessity.

2. Programming in C, C++

Brief introduction and review computer and languages. C, C++ Input output statements, control statement, if for while, switch statement, function. Pointer nations.

Array, matrix, string, structure, class concept of object oriented Programming, Features of C++ over C.

3. Computer Graphics-

Graphic systems, CTR, Display devices, Co-ordinate representation, Graphic functions. Output primitives-Bresenham's line drawing and Mid-point circle algorithms. 2-D and 3-D transformations concatenation. Exercise and programs.

Curve representation. Interpolation vs approximation. Spline curve. Bezier curves and its properties. Brief mention of other curves.

Graphic - Polygon surface, quadric and super quadric surface and B-spline objects Solid modeling-Sweep representation wire mesh, constructive solid geometry and Boolean operations. Boundary representation, Colours.

4. Computer Aided Design of Machine Elements and Other systems.

CAD of machine elements such as shaft, springs, bearing and problem from other system such as heat exchanger, inventory control etc. Writing computer program in C.A. Auto CAD and its uses.

5. Introduction to Numerical Methods and Optimization Technique-

Introduction to Numerical techniques and optimization. Curve fittings. least square method. Newton-Raphson method for root finding and for optimization. Brief introduction to numerical differentiation and integration. Linear programming for constrained optimization (only graphical method) .

6. Introduction to Finite Element Method (FEM)

Introduction and applications of FEM. One / Two dimensional beam element (spring system) analysis.

Books / References.

1. Computer Graphic by Hearn & Baker, Prentice Hall.
2. CAD / CAM by Groover
3. Let us C by yaswant kanetkar and also on C++
4. Computer aided analysis & design of machine elements by Rao & Dukhipati
5. Numerical methods using C by Xavier.
6. Optimization - SS Rao
7. FEM - SS Rao

CAD LAB

say minimum 6 experiments from following

1. Line drawing or Circle drawing algorithm experiment : writing the program and running it on Computer.
2. Transformations algorithm experiment for translation / rotations / scaling : writing program and running it on computer.
3. Design problem experiment: writing the program for design of machine element or other system and running it on computer.
4. Optimisation problem experiment: writing a program for optimizing a function and running it on computer.
5. Auto CAD experiment: understanding and use of Auto CAD commands.
6. Writing a small program for FEM for 2 spring system and running it. OR using a FEM package.
7. Use of graphic software standards packages e.g. GKSS / PHICS / GL etc.
8. Use of pro Engineer / Idea etc.

Computer Aided Manufacturing

Course Code (ME-602)

Credit 5(3-0-2)

1. **Introduction:** Need and future of NC systems and CAM in India. Advantages & Disadvantages. Classification. Open and closed loop. Historical development and future trends. Closed loop. Historical development and future trends.
2. **Features of NC Programming:** Difference between ordinary and NC machine tools. Methods for Improving Accuracy and Productivity.
3. **NC Part Programming:** (a) Manual (word address format) programming. Examples drilling and milling.
(b) APT programming, Geometry, Motion and Additional statements, Macro statement.
4. **System Device:** Introduction to DC motors, stepping motors, Feed back device such as encoder, counting devices, Digital to Analog converter and Vice versa.
5. **Interpolators:** Principle, Digital Differential Analyses. Linear Interpolator and its software interpolator.
6. **Control of NC systems:** Open and closed loops. Automatic control of closed loops with encoder & tachometers. Speed variation of DC motor. Adaptive control.
7. **Computer integrated manufacturing system:** Manufacturing cell, Transfer lines, FMS, CIM, CAD / CAM concept.
8. **Robotics:** NC machine vs Robots. Types and generations of Robots. Robot applications. Economics, Robot programming methods. VAL and AML with examples. Introduction to Artificial intelligence for intelligent manufacturing.

Books / References:

1. Computer control of Manufacturing systems by Koren
2. Robots by Koren
3. NC Machines by Koren
4. CAD / CAM by Groover.

CAM LAB

Minimum four experiments

1. Writing a part - programming (in word address format or in APT) for a job for drilling operation (contouring and running on NC machine).
2. Writing a part programming (in word address format or in APT) for a job milling operation (conducting) and running on NC machine.
3. Experiment on Robots and its programs.
4. Experiment of difference between ordinary machine and NC machine, study or retrofitting.
5. Experiment on difference between ordinary machine and NC machine, study or retrofitting.
6. Experiment on study of system devices such as motor and feed devices.
7. Experiment on Mechatronics & controls.

AUTOMOBILE ENGINEERING

Course Code (ME-603)

Credit 4(2-1-

1)

Power Unit Gear Box:

Principles of design of main components. Valve mechanism. Power and Torque characteristic. Rolling, air and gradient resistance. Tractive effort, Gear Box, Gear ratio determination. Design of gear Box.

Transmission system:

Requirements, clutches. Torque converts. Over Drive and free wheel, Universal joint. Differential Gear Mechanism of Rear Axle. Automatic transmission, steering and Front Axle. Castor Angle, wheel camber & Toe in Toe out etc. Steering geometry. Ackerman mechanism, Understeer and Oversteer.

Braking System:

Generals requirements, Road, tyre adhesion, weight transfer, Braking ratio. Mechanical brakes, Hydraulic brakes. Vacuum and airbrakes. Thermal aspects.

Chassis and suspension system:

Loads on the frame. Strength and stiffness. Various suspension system.

Electrical System:

Types of starting motors, generators & regulators, lighting system, Ignition system, Horn, Battery etc.

Fuel System:

Diesel & Petrol Vehicle system such as Fuel Injection Pump, injector & Fuel Pump, Carburetor etc. MPFI.

Cooling & Lubrication System:

Different type of cooling system and lubrication system. Maintenance System: Preventive maintenance, break down maintenance, and over hauling system.

References:

1. Automotive Engineering - Heitner
2. Automotive Engineering - Kripal Singh
3. Automotive Engineering - Narang
4. Automotive Mechanics - Crouse
5. Automotive Engineering - Newton and Steed.

AUTOMOBILE ENGINEERING - LAB

Say any study & experiment from the following

1. Study & experiment on braking system.
2. Study & experiment on fuel supply system.
3. Study & experiment on ignition system.
4. Study & experiment on steering system
5. Study & experiment on transmission system
6. Study & experiment on suspension system.
7. Study safety aspect of automobile design.
8. Study & experiment on Lighting or lubrication system.

9. Study & experiment on lubrication and cooling system
10. Comparative study features of common small cars (such as Fiat, Ambassador, Maruti, Matiz, Santro, Indica and its variations) available in India.
11. Comparative study & technical features of common scooter & motorcycles available in India. Case study / term paper.
12. Comparative & technical features of common heavy vehicles available in India. case study / term paper.
13. Engine tuning and carburetor servicing experiment.
14. Experiment & study of MPFI system.
15. Experiment on fuel consumption measurement.
16. Review experiment on IC Engines & modern trends.
17. Visit of a Automobile factory.
18. Study & experiment of main gear box and differential gear box.

MECHANICAL SYSTEMS DESIGN

Course Code (ME-606)

Credit 4(3-1-0)

- 1. Engineering Process and Systems Approach:** Applications of systems concepts in Engineering, Identification of engineering, Identification of engineering functions, systems approach, Engineering Activities Matrix, Defining the proposed effort, Role of Engineering problem solving. Concurrent Engineering. A case study : eg. Viscous lubrication system in wire drawing.

2. **Problem formulation:** Nature of engineering problems, needs statement, Hierarchical Nature of systems hierarchical nature of problem environment, Problem scope and constraints. A case Study; e.g. Heating duct insulation-System High - Speed belt drive system.
3. **System Theories:** System analysis View-points, Black Box approach, state theory approach, component integration approach. Decision. Process approach; A case study: e.g. Automobile instrumentation panel system.
4. **System Modeling:** Need for modeling, modeling types and purpose, Linear graph modeling concepts, Mathematical Modeling, Concepts, A case study: e.g. A compound bar system.
5. **Linear Graph Analysis:** Graph modeling and analysis process, Path problem, Network flow problem, A case study: e.g. Aluminium extrusion system.
6. **Optimization concepts:** Optimization process, Motivation and freedom of choice goals and objectives- Criteria, Methods of optimization analytical combinatorial , subjective. A case study : e.g. Aluminium extrusion system.
7. **System Evaluation:** Feasibility assessment, planning horizon, time value of money, Financial analysis. A case study e.g. manufacture of a maize-starch system.
8. **Calculus Methods for optimization:** Model with one decision variable, Model with two decision variables, Model with equality constraint, Model with inequality constraint. A case study : e.g. Optimization of an insulation - system.
9. **Decision Analysis:** Elements of a decision problem, Decision model Probability a dignity function, Expected monetary value. Unity value, Baye's theorem : A case study : e.g. Installation of a machinery.
10. **Systems Simulation:** Simulation concepts, simulation models, Icons Analog Analytical, Waiting Line simulation, Simulation process problem definition, input model construction, solution process, limitations of simulation approach : A case study : e.g. An inventory control in a Production-Plant.

Suggested Text Books / References:

1. Design and Planning of Engineering systems- by D.D. Raredith, K.V. Wong, R.W. Woodhead, and R.R. Worthman, Prentice Hall Inc. Englewood Clifts, New Jersey.
2. Design Engineering Design Method- by J.R. Dixon, Tata Mc.Graw-Hill Publishing Company, New Delhi.
3. An Introduction to Engineering Design Method- by V. Gupta and P.N. Murthy, Tata Mc-Graw-Hill.
- 4- Engineering Design- Robert Matousck, Blackie and Son Ltd. Glasgow.
5. Optimization Techniques- S.S. Rao.
6. System Analysis and Project Management- Devid I Cleland, William R. King. McGraw-Hill.

TOTAL QUALITY MANAGEMENT

Course Code ME-665

CREDIT : 3 (3-0-0)

- Concept of quality, Quality control and quality management.
- Science of quality. Human resources and quality
- Quality Organization and management: Quality manual. Quality cost .Quality related tasks
- Quality Information system : planning. Hardware-software
- Statistical process control and quality development techniques
- Controlling quality through measurement and through counting
- Quality system and ISO 9000 series
- Quality assurance. Reports on quality. Quality audit Quality training
- Newer quality management approaches
- Quality Tools

ROBOTICES

Course Code ME-670

CREDIT; 3(3-0-0)

INTRODUCTION : Past , Present and future ; Robot Terminology ; Applications , Components and Sub-systems , Classification of Robot , End Effectors , Different types of grippers and design concepts .

ROBOT KINEMATICS : Object location , Homogeneous , Transformations , Direct and inverse kinematics , Manipulator motion .

ROBOT DRIVES, ACTUATORS and CONTROL: Drive systems hydraulics , pneumatic and electrical .
DC Motor , Stepper Motor , Robot motion and path control , Controller.

SENSORS AND PERCEPTION : Type of sensors , vision system . Computer interfaces

FINITE ELEMENT METHOD IN ENGINEERING

Course Code ME-671
0-0)

CREDIT; 3(3-

Approaches of FEM- Discrete, Variational and Weighted Residual; Direct Problems- Spring, Hydraulic Network; Resistance Network and Truss Systems; 1-D Field and Beam Bending Problems; 2-D and Axisymmetric Field and Stress Problems; Plate Bending; 3-D Stress Analysis; Solutions of Unsteady Problems related to Stress? Analysis, Heat Conduction,?? Fluid flow and Vibration. Solutions of Plane Stress, Plane Strain and Axisymmetric Plasticity Problems.

ADVANCED WELDING? TECHNOLOGY

Course Code ME-672
3(3-0-0)

CREDIT;

1. A review of various metal joining? techniques such as welding, brazing, soldering and adhesive bonding, welding compared with other processes of fabrication. Classification of welding processes. Application of welding processes.
2. Fusion Welding: Mechanism of arc initiation and maintenance, Temperature distribution. Techniques, scope and limitations of manual metal arc. TIG, MIG, submerged arc. Electroslag welding. Plasma Arc and Electro gas welding. Various gas welding processes e.g. oxyacetylene oxy-hydrogen welding processes.
3. Resistance welding, Modern welding processes viz. Electron Beam, Ultrasonic; Explosive, laser beam processes and their applications. Solid state welding processes viz.? Friction, Diffusion, cold pressure process and their applications.
4. Oxygen cutting Plasma Arc cutting. laser cutting processes etc.
5. Brazing, soldering and adhesive bonding. Scope and application.
6. Welding? defect? and remedies. Weld cracking and prevention. Testing and inspection of welds.

MECHATRONICS

Course Code ME-673
0)

CREDIT : 3 (3-0-

Fundamentals of Mechatronics, definitions and Concepts; Conventional vs Mechatronics Systems; Need of? Mechatronics in Mechanical Engineering; Sensors and Transducers with? Special?? reference to Mechatronics.

Signals System and actuating devices; real time interfacing. Applications of? Mechatronics in Manufacturing and Automation Case Studies.

METAL FORMING

- 1- Fundamentals of Elasticity, Plasticity and Viscoplasticity, Stress and strain invariant
?Elasticity- State?? of stress and strain, stress-strain relations,? strain-displacement relations.
Plasticity and Viscoplasticity: Yield?? criterion, effective stress and strain, state of plastic strain, Plastic strain rate, Flow rule, Effective strain rate, plastic anisotropy and viscoplasticity (determination of load and power) concept of solid and flow formulations.?
- 2- Analysis of Deformation Processes using SSM, UBM & SLM
Plain strain Problems: Drawing and Extrusion of sheet, Rolling and forging of strips.
Axisymmetric?? Problems: Drawing and Extrusion of bar and tube, forging of solid and Hollow disc.
Sheet metal problems: Axisymmetric deep drawing and stretching.

ENERGY CONSERVATION

Course Code ME-674

CREDIT : 3

(3-0-0)

1.Introduction: The energy crisis and options: the energy conservation option, energy intensity of developed and developing economies, energy auditing ? basic requirements, scope and purpose, process energy and gross energy requirements.

2.**Efficient energy conversion:** efficient combustion, waste as a fuel, combined cycles for efficient power generation, combined heat and power plants, combined cooling and power plants.

3. **Energy recovery:** insulation: insulating materials, economic thickness of insulation; heat recovery heat exchangers: recuperative heat exchangers, run-around coil systems, regenerative heat exchangers; heat pumps; and heat-pipes.

4. **Process integration:** basic concepts of pinch technology, stream networks, significance of the pinch, design of energy recovery system.

5. **Energy conservation in buildings:** degree-days, steady state loads and comfort. Conditioning the air for process requirements and human comfort, thermal performance monitoring, efficient lighting systems, solar passive features.

6. Economics of energy saving schemes and case studies.

CAD OF THERMAL SYSTEMS

Course Code ME-675

CREDIT : 3 (3-0-0)

Study of the design aspects. Fluid flow and heat transfer characteristics and materials requirements of at least two of the following types of heat exchange equipment: Liquid-to-liquid, Liquid-to-gas and gas-to-gas heat exchangers. Cooling tower, Familiarity with the use of the design related international/national and other codes.

Preparation of necessary computer programs for designing the thermal system. Learning of the techniques for presenting design features of the thermal equipment.

Reference Book:

1. Process Heat Transfer by D.Q.Kern
 2. Heat Exchanger Design by A.P.Fraas and M.N.Ozisik
 3. Heat Exchangers: Selection, Rating and Thermal Design-Hongtan Lui & Sadic Kakac.
- CRC Press.
- . ISO, ISI and TEMA Codes.

Metal Forming

Course Code ME-676

CREDIT : 3 (3-0-0)

METAL FORMING

UNIT-I

Plasticity – True stress strain diagrams in simple tension – Deviation from Engineering stress – Strain curves. Three dimensional stress system, strain tensor and yield Criteria of metals.

UNIT-II

Fundamentals of metal forming – Classification of forming processes – Cold working – Recovery – Recrystallisation and grain growth, hot working. Strain rate effects – work of plastic deformation

UNIT-III

Flow stress curves – Super plasticity in materials – Hot working and cold working operation – Relative merits and applications.

UNIT-IV

Sheet metal working: Standard die sets, simple, compound, combination, progressive and transfer dies. Process parameters and estimation of loads in shearing, bending, deep drawing, shear spinning operations. Mechanical and hydraulic presses, relative merits and application – constructional features and operation.

UNIT-V

FORGING: Open die and closed die forging, machine forging, upset forging etc., forging loads, forging die design. Estimation of forging loads for rectangular and cylindrical slugs. Forgeability Tests. Defects in forging, Forging equipment – constructional features and operation.

UNIT-VI

ROLLING: Principles of rolling, Process parameters, Estimation of rolling loads by consideration of stresses. Principles of roll pass design for various product shapes. Principles of ring rolling. Processing maps and their applications in metal working operation. Rolling mills – Their constructional features and operation.

UNIT- VII

EXTRUSION: Classification of extrusion processes, extrusion equipment. Hot extrusion. Deformation and defects in extrusion. Analysis of the extrusion processes, cold extrusion. Extrusion of tubing and production of seamless pipe and tubing.

UNIT- VIII

DRAWING OF RODS, WIRES AND TUBES: Rod and wire drawing, tube drawing process, residual stresses in rod, wire and tubes.

TEXT BOOK:

G. E Dieter: Mechanical Metallurgy.

REFERENCE BOOKS :

1. "An Introduction to the Principles of Metal Working" by Geoffery W. Rowe.
2. "Sheet working of Metal" by Eary and Reads.
3. "Manufacturing Sciences" by Amitabh Ghosh and Mallik.
4. "Manufacturing Technology" by P. N. Rao.

REVERSE ENGINEERING

Course Code ME-677

CREDIT : 3 (3-0-0)

- 1- Introduction of Reverse and concurrent engineering. Elements of concurrent engineering. Advantage and applications.
- 2- Theory of measurements. Linear, angular, curved surfaces, methods of advanced Measuring devices, Coordinate Measuring machine. Elements to CMM. Data accumulation, retrieval..
- 3- Geometric Modelling. 2D and 3D Graphics, concepts of various transformation of Geometric Models, Wireframe surface and solid modelling techniques, representation of parametric and non-parametric curves and surfaces, Mathematical representation of solid and solid modeling- based applications. CAD/CAM data exchanges. Visual realism and Graphics Tools, Applications, Auto-CAD, Auto surt, Auto Mil. And UNIGRAPHICS. CAD/CAM interfaces, process planning, computer aided production planning systems. Capacity planning. Part Programming. APT, CAPPS programming, Geometry definition, Tool Path generation.
- 4- **Rapid Prototyping:** Concurrent Engineering, Need of Rapid Prototyping. Techniques, Resins, (Laser engines) Laser, Laser production and control. Post curing, Data retrieval from CAD, MIC codes generation, Apparatus for quality measurement.(CMM)

SUPPLY CHAIN MANAGEMENT

Course Code ME-678

CREDIT : 3 (3-0-0)

0-0)

1. Introduction to Logistics and Supply Chain Management. Concepts, Drivers and obstacles.
2. Planning Demand and supply in a supply chain-Demand forecasting, Aggregate Planning.
3. Management of Inventory in global supply Chain.
4. Role of Information Technology in supply chain. e-Business and the supply chain
5. Factors influencing logistics and decision.
6. Bench making and performance measurement.

MECHANICAL VIBRATION

Course Code ME-679

CREDIT : 3 (3-0-0)

UNIT - I

Introduction

Periodic motion, harmonic motion, superposition of simple harmonic motions, beats, Fourier analysis 3

Single Degree Freedom System

Free vibration, Natural frequency, Equivalent systems, Energy method for determining natural frequency, response to an initial disturbance, Torsional vibrations, Damped vibrations, Vibrations of systems with viscous damping, Logarithmic decrement 5

UNIT - II

Single Degree Freedom: Forced Vibration

Forced vibration, Harmonic excitation with viscous damping, steady state vibrations, Forced vibrations with rotating and reciprocating unbalance, Support excitation, Vibration isolation, Transmissibility, Vibration measuring instruments, Displacement, velocity and acceleration measuring instruments 8

UNIT- III

Two Degree Freedom systems

Introduction, Principal modes, Double pendulum, Torsional system with damping, coupled system, undamped dynamic vibration absorbers, Centrifugal pendulum absorbers, Dry friction damper 8

UNIT- IV

Multi Degree Freedom system: Exact Analysis

Undamped free and forced vibrations of multi-degree freedom systems, influence number, Reciprocal theorem, Torsional vibration of multi-degree rotor system, Vibration of gear system, Principal coordinates, Continuous systems- Longitudinal vibrations of bars, Torsional vibrations of circular shafts 8

UNIT- V

Multi Degree Freedom system: Numerical Analysis

Rayleigh's, Dunkerly's, Holzer's and Stodola methods, Rayleigh-Ritz method 5

CRITICAL SPEED OF SHAFTS

Shaft with one disc with and without damping, Multi-disc shafts, Secondary critical speed. 3

Books and References:
